# Toast Notifications

## Exploring

### Where does it fit in?

Toast notifications are notification windows that display information briefly on the screen to alert you of a condition, before disappearing automatically without requiring any operator input.

Toast notifications with only a single button are presented as **auto-expiring** messages.

- Although toast notifications cannot be customized in the traditional sense of the word, you can set a delay time to keep the notification displayed on screen and you can configure it to close once you start typing.
- If the message contains a colon character (:) it is treated as a data notification.

You can view the last 20 data notifications by selecting the **Notification** icon from the SYSPRO Ribbon bar.

# Starting

## Access Control

### Activities

You can restrict operator access to **activities** within a program. These are configured using the **Operator Maintenance** program.

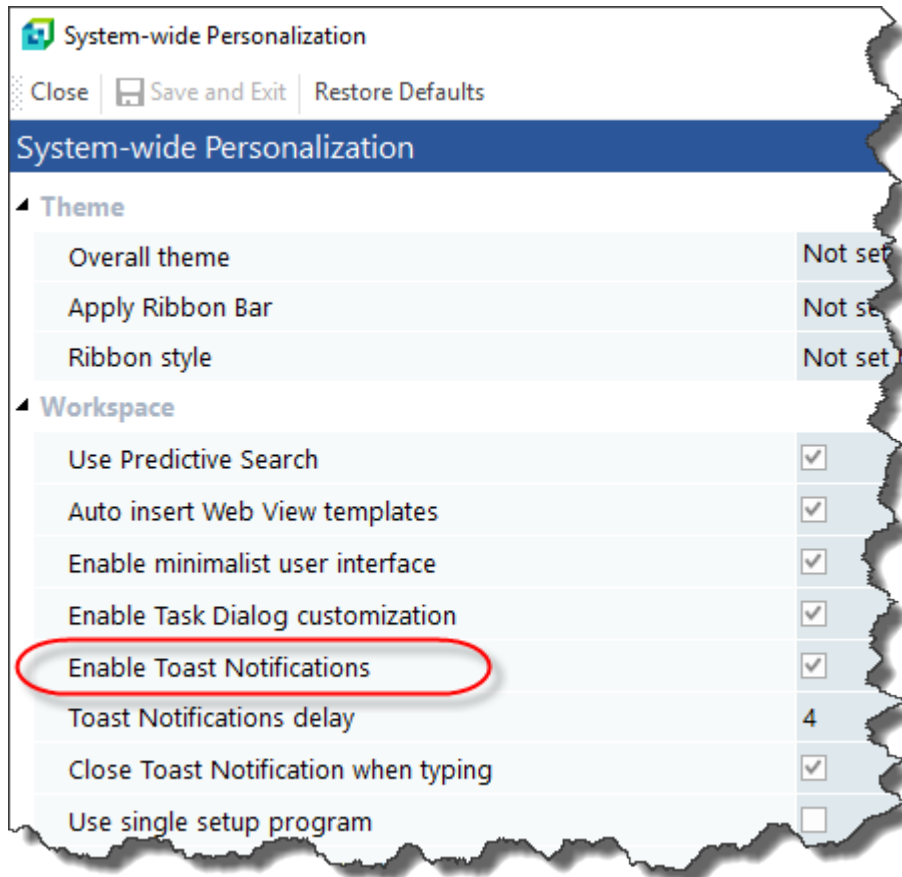

#### **Main menu - Allow to customize task dialogs**

Controls whether an operator can customize task dialogs and show dialogs with single buttons as auto-expiring messages (i.e. toast notifications). This must be enabled if you are not customizing at role level.

# Using Tasks

## How to switch on Toast notifications

1. Load the **System-wide Personalization** program (*SYSPRO Ribbon bar > Administration > System-wide Personalization*).
2. Switch on the **Enable Toast Notifications** option.
