## **About This Guide**

## Version SYSPRO 8.02

The Point of Sale Installation Guide provides you with the details you require in order to install Point of Sale. The topics include:

## • Architecture

- Online
- Head Office Server Components
- Offline
- Branch Server Components
- Functionality
- Online vs Offline Functionality
- Services
  - SYSPRO 8 Avanti Initialization Service
  - SYSPRO 8 e.net Communication Load Balancer
  - Point of Sale Services
  - SYSPRO 8 Point of Sale Autorun
- Replication
- Hardware and Software Requirements
  - Hardware Requirements
  - Software Requirements
  - Internet Requirements
  - SYSPRO Setup Requirements
  - Integration with SYSPRO ERP
  - Licensing
- Installing Online
- Installing Offline

Note: This guide is aimed at SYSPRO users who have a good understanding of the Windows operating system environment, Microsoft SQL Server and Internet Information Services. This requires an understanding of technical aspects of the SYSPRO environment and is not recommended for first time users.

# Introduction

## **Overview**

SYSPRO Point of Sale (PoS) requires installing the online and offline Point of Sale application on individual servers to provide retail functionality, via the web, to clients. It interfaces directly into the main SYSPRO installation and provides for a rich and purpose-driven interface that users can use in any location, using an internet browser.

There are two main setup options, namely:

- The **online** version, which must be installed on the same server as the main **SYSPRO** installation, 1. provides full accessibility to all the functions provided by the SYSPRO Point of Sale system.
- 2. The offline version, which is installed on a server at each store location and synchronizes with the head office server at pre-configured time intervals.

**(C)** Note: The offline version requires the online version to function. An online and offline instance should not be installed on the same machine. In addition, each SYSPRO Point of Sale company must be installed as a separate website.

# Architecture

## Introduction

The **SYSPRO Point of Sale Offline** architecture has been designed to ensure that critical sales functionality at store locations is available at all times. So if the line to Head Office drops, the operators will still be able to trade completely unaffected.

An important note here is that the architecture has been designed to ensure that your store can trade and access critical customer-facing functionality in the event that the lines to Head Office have gone down. It is not designed to cater for bad lines to Head Office as there are still functions that require a connection to Head Office. The architecture also pulls and pushes data from Head Office automatically and this requires decent connection speeds to Head Office.

The architecture also allows for transactions to be processed offline at trade shows etc, where there is no connection to Head Office at all. As soon as the laptop is connected to the network again, it will automatically sync and post transactions.

Do: Run offline for trade shows and connect later to sync all transactions processed.

Don't: Utilize offline architecture at a branch to cater for bad or little connection to Head Office.

There is a direct relationship between line speed and volume of transactions so it is important to consider all aspects of the architecture and connection when implementing **SYSPRO Point of Sale**. It is good practice to ensure that stores have back-ups or failover lines in place. Connection to **Head Office** should still be given high priority to ensure you have close to real-time processing from **SYSPRO Point of Sale** to **SYSPRO**.

Connection to Head Office should still be given high priority to ensure you have close to real-time processing from **SYSPRO Point of Sale** to **SYSPRO ERP**.

An overview of the **SYSPRO Point of Sale** (PoS) architecture is depicted below. As you can see, you are able to run a hybrid architecture which enables some branches running online, and others running offline. Typically, In a retail environment, the offline architecture will always be deployed regardless of line speeds and failover lines, to ensure that if the lines do drop for whatever reason, the store can still trade.

Figure 1: PoS Architecture On and Offline

## **Architectural Changes**

## WCF Performance

**SYSPRO Point of Sale** has been changed to leverage off the SYSPRO WCF Service for e.net. This change harnesses all the multi-threaded/scalability improvements that has gone into SYSPRO 7. Users will experience a dramatic performance improvement, especially with large volumes of transactions.

Install

The **SYSPRO Point of Sale** Install will seamlessly install all **Point of Sale** components and pre-requisites.

The install provides for both online and offline server installations as well as allows you to install multiple versions for multiple **SYSPRO Companies**.

Replication has been moved out of the install and into the branch setup so when creating an offline branch, you have the option to create the publications and subscriptions from within the branch setup.

The Install will do the following:

- 1. Install pre-requisites
- 2. Install SYSPRO 8 e.net Communication Load Balancer
- 3. Install Point of Sale components
- 4. Install Point of Sale Services
- 5. Install SYSPRO POS Offline Foundation (for offline branches)

## Automatic Database Updates, Sync Service and Port Updates

The underlying **SYSPRO Point of Sale** architecture has been enhanced to improve real time updates and database changes seamlessly.

Similarly, if any updates are required it will auto update (components and database) based on the version currently deployed or updated.

The **Sync service** has been enhanced to control all updates of the software on the main server and all branch servers. As soon as an update file is found, it will ensure that components are copied to all required servers and auto update both the database, **Point of Sale** components and **SYSPRO** components required on the offline server.

This means that port updates can be done automatically as part of the **SYSPRO** porting architecture.

## • Multi-company

The **SYSPRO Point of Sale** posting service has been enhanced to post per company. Only a single service is installed and the service itself will control posting to multiple companies. It will post on a different thread per company meaning it still operates as a separate service but is only installed once.

## **Online Architecture**

In the online architecture, branches are logical groupings based on operator logins. A *Point of Sale* operator must be assigned to a specific branch so that when they login, they will automatically be trading under the branch to which they have been assigned.

The operators log on to the main application server when they log in to **SYSPRO Point of Sale**. This means that if the lines to Head Office go down, they will not be able to trade until the connection has been restored.

All users from all branches connect to the main server through a browser which points to the Head Office server IP address directly for **ALL** functionality

(e.g http://Head-office-server/SysproPOS/login.aspx).

Figure 2: Point of Sale Online Architecture

## **Head Office Server Components**

## 1. SYSPRO

This is the SYSPRO ERP software.

## 2. SYSPRO Point of Sale Online

This is the online version of the SYSPRO Point of Sale software, including the web components required for each SYSPRO Point of Sale company to transact.

## 3. SYSPRO POS Sync Service

This is a **Microsoft Windows** service that checks for any Point of Sale updates that may have been ported and automatically updates the software accordingly. This can be configured to run at a specific time in the day (after hours) so that the required IIS can restart without affecting trading.

## 4. Printing Service

This service controls all the printing done from within SYSPRO Point of Sale.

## 5. Copy Service

This is a **Microsoft Windows** service which is installed on the **Head Office** server and has a list of all branch servers that have been installed. This service continually checks each branch server for transactions that need to be copied up to the Head Office server. If it finds a transaction, it copies it from the branch server (where the Offline Foundation version of SYSPRO ERP is installed) to the Head Office server (where the complete version of SYSPRO ERP is installed) and marks it as "copied" on the branch server.

## 6. Posting Service

This is a **Microsoft Windows** service which is installed on the **Main Server** and which checks for offline transactions that have been copied from the branch server to the Main Server but not yet posted to SYSPRO ERP. The only thing this service does is post copied offline transactions to SYSPRO ERP. This service can be configured to post at defined intervals.

#### Sysprodb 7.

This is the key database used for core SYSPRO. It indicates the company ID for each company.

Note: There is only one Sysprodb per SYSPRO installation.

#### **SysproCompanyID** 8.

This is the SYSPRO ERP database used for core SYSPRO. It contains triggers, functions, and stored procedures in the database tables which SYSPRO Point of Sale uses to access master information.

Note: This database must exist for each SYSPRO company.

SysproCompanyID POS This is the database which stores key SYSPRO Point of Sale information. 9.

Note: This database must exist for each SYSPRO Point of Sale company.

#### 10. SQL Replication

When there is an offline branch installed, SQL replication must be configured on the Main Server. This pushes all relevant SYSPRO and SYSPRO POS data down to the branch. Replication is incremental so every time a record changes in one of the tables being replicated, it is automatically pushed to each branch (provided the branches are online).

Note: No transactional data is replicated; only master data is replicated.

## **Offline Architecture**

In the Offline architecture, there is an additional server required at each store location to which all users at the location log on. The architecture pushes data from the Head Office server to the branch server via standard SQL replication. Transactions are then copied to Head Office and posted into ERP SYSPRO automatically as described below.

When running the Offline architecture, there is certain functionality that is configured to work offline and some functions that work only when online. This means that any functionality that is not configured with the offline architecture requires a connection to the Head Office server to work. The software detects if you are not connected to the Head Office server, and notifies you that you are offline, and indicates that you should try again later.

All users at the Offline branch connect to the branch server when accessing offline functionality and the Main Server when accessing online functionality. The menu options point to the relevant server accordingly so when accessing a menu item that runs via the offline foundation, it will look at the Offline server (e.g.http://branch-server/SysproPOS/login.aspx).

When accessing a menu item that runs via the online foundation, it points to the online server (e.g. http://head-office-server/SysproPOS/login.aspx)

**1** Note: The software that is installed on the Main server and the Branch server is identical; it is just the location to which it points and from which the functionality runs that changes.

## Figure 3: Point of Sale Offline Architecture

## **Branch Server Components**

1. **SYSPRO Offline Foundation** This is a basic version the SYSPRO ERP software which installs the base SYSPRO components required by the Offline server to run and query business objects.

## 2. SYSPRO Point of Sale Offline

This is the offline version of the SYSPRO Point of Sale software.

## 3. SYSPRO POS Sync Service

This is a **Microsoft Windows** service that checks for any Point of Sale updates that may have been ported and automatically updates the software accordingly. This can be configured to run at a specific time in the day (after hours) so that the required IIS can restart without affecting trading. The secondary purpose of this function in the offline environment is to check for any business object or work file changes that need to be applied to the Branch server. If it detects any updates, it copies down the relevant files needed by the SYSPRO Offline foundation. This service should only be configured to run once a day after hours or as required when SYSPRO settings have changed or updates have been made.

## 4. Printing Service

This service controls all the printing done from within Point of Sale at the branch.

## 5. Sysprodb

This is a partial database used for core SYSPRO which has been replicated down to the branch. It indicates the company ID for each company as well as all the master data required by PoS (customers, stock, warehouse, pricing etc.).

C

Note: There is only one Sysprodb per SYSPRO installation.

## 6. SysproCompanyID\_PoS

This is the database which stores key Point of Sale information and offline transactions at the branch.

Note: This database must exist for each SYSPRO Point of Sale company.

## **Offline Functionality**

Functionality available in the offline architecture is listed below:

**Note:** All other functionality is available from the branch running on the offline architecture, but only if the branch server has a current connection to the head office server.

## Store

- Point of Sale
- Account Payments
- Manage Quotes
- Credit Notes
- Exchanges

#### Query

- Customer Query
- Inventory Query

#### Finance

- Cash-up slip
- Supervisor cash-up
- End of day
- Sales Report
- Payments Report

The functionality that is available when the lines are down is the critical customer-facing sales functionally which enables the operators to take payments and service customers.

All other functionality is viewed as setup or store management functionality which can be delayed if required. So, for example, if the lines are down and stock has arrived, you won't be able to receive it in until the lines are restored; but the operators are still able to sell the stock. Most of the **Store Management** functionality is transactional by nature and the source transaction may not have originated from the branch. This means that it cannot be edited or changed at a local branch as someone may have changed it in SYSPRO or at another branch. This would lead to data integrity issues as there would be multiple sources of the truth. For this reason, the functionality is only available when you have a connection to the head office server and the transaction is actually created or maintained directly on the head office server.

**Manage Orders** is a more complex order creation program that allows you to do a more complex transactions in SYSPRO Point of Sale (like deposit orders, order maintenance, partial invoicing etc.). This is only available when you have a connection to the head office server for the reasons mentioned above. Operators can fall back to the Point of Sale screen to process sales if the lines are down, but none of the complex ordering functions are available in **Manage Orders** until the lines are restored.

## **Online vs Offline Functionality**

The following table indicates which SYSPRO **Point of Sale** programs are available Online and Offline within each of the Six modules available.

PARENT/NAME	ONLINE	OFFLINE		
Setup				
Branch Settings	YES	NO		

PARENT/NAME	ONLINE	OFFLINE	
Branch Selection	YES	NO	
Branch Customers	YES	NO	
Branch Licenses	YES	NO

Finance				
Manage Currency	YES	NO		
Cash Up Slip	YES YES			
Supervisor Cash-Up	YES	YES		
End of Day	YES	YES		
Sales report	YES	YES		
Payments Report	YES YES			

Note: When an Offline System (such as a client at an offline branch) attempts to perform online functionality such as Manage Orders - the printing will occur from the main server as well. The Main Server will have to be able to see the branch's printers in order to be able to print to there (such as permissions etc.)

The **Create SCT and GIT Receipt** programs currently cannot save locally and are only available online. The offline branch needs to be able to connect to the Online server in order to access the functionality - so the above applies to this functionality as well.

**Inventory and Customer Query** have certain functionalities that will only function if the client machine can connect to the main server directly. Even though the Branch server may be able to connect to the Main Server, the functionality will not work if the client itself cannot make that connection.

# **Services**

The following services, which are installed and used both on the Head Office (Online) Server and Branch (Offline) Servers, and are critical to both the Online and Offline installations of SYSPRO Point of Sale.

## SYSPRO Avanti Initialization Service

This **Windows** service is responsible for starting the **SYSPRO.exe** process on the SYSPRO Application Server, together with a number of other SYSPRO-specific functions such as accessing the file system on the application server and controlling authentication when logging into SYSPRO.

## • SYSPRO 8 Point of Sale e.net Communications Service

Based on **Windows Communication Foundation**, this service exposes the **SYSPRO64.DLL** library to internal and external applications that need to interact with SYSPRO (e.g. SYSPRO Espresso, Predictive Search, third party developer applications, etc). Data is retrieved from the SYSPRO database using the open e.net architecture, without compromising data integrity.

This service replaces the **SYSPRO e.net WCF Service** (originally developed to replace SYSPRO Web Services and DCOM) and provides for load balancing functionality as well as being fault tolerant (e.g. if a channel fails, a new thread is initiated automatically to prevent the whole service from failing).

## • SYSPRO 8 Point of Sale Services

This service lets you synchronize master data, copy transactional data from offline branches to the main server and post transactional data that was copied from offline branches.

It comprises the following services:

## • SYSPRO 8 Point of Sale Synchronize Service (mandatory)

This is installed in both Online and Offline environments and is used to synchronize master data (i.e. it self-heals PoS Web Site components).

SYSPRO 8 Point of Sale Copy Service (optional)

This copies transactional data from Offline branches to the Main Server.

SYSPRO 8 Point of Sale Posting Service (optional)

This posts the transactional data that was copied from Offline branches.

## Syncing SYSPRO files

Depending on the **UpdatedInterval**, the SYSPRO file syncing will execute and retrieve the latest SYSPRO files from the Main Server and proceed to copy it to the branch.

The files that are copied are depended on the results returned by the POSQRY business object. The branch will check POSQRY and gather all the file details that are currently in the directories contained in the branch SYSPRO installation; this includes:

- Filenames
- Create data
- Modified date

This list is sent to the **Sync Web Service**. The list of files received from the web service is then compared to the files on the main server. Files which do not match create and modified dates are added to a zip file which will then be streamed down to the windows service. These files will be extracted and used to update the branch's SYSPRO.

The IMPACT.INI file will not be copied down, instead a copy is made and renamed to IMPACT\_POS.INI and copied down to the branch.

## **SYSPRO 8 Avanti Initialization Service**

This **Windows** service is responsible for starting the **SYSPRO.exe** process on the SYSPRO Application Server, together with a number of other SYSPRO-specific functions such as accessing the file system on the application server and controlling authentication when logging into SYSPRO.

This service is used by: SYSPRO Avanti.

The default location for this service is (**Program Files** > **SYSPRO** > **SYSPRO** Avanti Unitization Service).

## **Prerequisites**

- Microsoft .NET Framework 4.6
- SYSPRO 8 Service Upgrade Manager
- SYSPRO 8 e.net Communications Load Balancer (valid endpoint configured in System Setup)

## Installation Considerations

This service is installed using the SYSPRO Installer as well as the Point of Sale Installer.

**Note:** This service must be installed on the same application as the SYSPRO 8 Server.

## **Debugging and Diagnostics**

## Service Config.exe file

You can debug this service by editing the associated **config** file in elevated mode (i.e. with administrator privileges). The **SYSPROInitializationHostService.exe.config** file is located in the folder to which you installed the service.

## **Windows Event Viewer function**

You can view monitoring and troubleshooting messages about this service using the **Event Viewer** function in Windows:

# (Control Panel > System and Security > Administrative Tools > Event Viewer > Applications and Service Logs).

This service outputs an event log to the SYSPROAIS file.

#### **Windows Services function**

You can start, stop, restart and configure this service using the Services function in Windows.

(Control Panel > System and Security > Administrative Tools > Services).

## **SYSPRO 8 e.net Communication Load Balancer**

Based on **Windows Communication Foundation**, this service exposes the **SYSPRO64.DLL** library to internal and external applications that need to interact with SYSPRO (e.g. SYSPRO Espresso, Predictive Search, third party developer applications, etc). Data is retrieved from the SYSPRO database using the open e.net architecture, without compromising data integrity.

This service replaces the **SYSPRO e.net WCF Service** (originally developed to replace SYSPRO Web Services and DCOM) and provides for load balancing functionality as well as being fault tolerant (e.g. if a channel fails, a new thread is initiated automatically to prevent the whole service from failing).

This service is used by SYSPRO 8 and any external or third party e.net application accessing SYSPRO data although you can continue running the older **SYSPRO e.net WCF Service** alongside the new **SYSPRO 8 Communications Service**, you will have to configure a different communication port.

This service is used by:

- SYSPRO 8
- SYSPRO Avanti
- SYSPRO Server-side Reporting
- SYSPRO Web-based Product Configurator
- Executive Dashboard SYSPRO Workflow Services
- SYSPRO e.net Diagnostics
- SYSPRO Point of Sale
- SYSPRO Harmony
- SYSPRO Espresso
- SYSPRO Machine Learning

Any external or third party e.net application accessing SYSPRO data

The default location for this server is:

(Program Files > SYSPRO > SYSPRO 8 e.net Communications Load Balancer).

## **Prerequisites**

- Microsoft .NET Framework 4.6
- SYSPRO 8 Server

## Installation Considerations

This service is installed using the SYSPRO Installer.

ß

**Note:** This service must be installed on the same application as the SYSPRO 8 Server.

## **Debugging and Diagnostics**

#### Service Config.exe file

You can debug this service by editing the associated **config** file in elevated mode (i.e. with administrator privileges). The **SYSPRO.8.enet.communications.exe.config** file is located in the folder to which you installed the service.

## **Windows Event Viewer function**

You can view monitoring and troubleshooting messages about this service using the **Event Viewer** function in Windows:

(Control Panel > System and Security Administrative Tools > Event Viewer > Applications and Service Logs).

This service outputs an event log to the **SYSPROAECS** file.

## Windows Services function

You can start, stop, restart and configure this service using the Services function in Windows.

(Control Panel > System and Security Administrative Tools > Services).

## Referencing

## **Configuration file**

**Note:** You should only edit this file for debugging purposes. Don't use this as a method to update values for the service. This is because a wizard installation updates the system registry, which is what is read when using the service. A fresh installation overwrites these values, which may cause problems when you next run the service.

Кеу	Description
baseaddress	This is the template base address at which all endpoints are hosted.
portNetTcp	This is the port at which the net.tcp binding is hosted.
portBasicHttp	This is the port at which the basic binding is hosted.
portWsHttp	This is the port at which the WS binding is hosted.
portRestHttp	This is the port at which the REST binding is hosted.
portNetPipe	This is the name of the named pipe endpoint.
InstanceContextMode	This value indicates when new service objects are created. It specifies the number of service instances available for handling calls that are contained in incoming messages.
ConcurrencyMode	This indicates whether a service supports one thread, multiple threads, or re-entrant calls. It specifies whether a service class supports single-threaded or multi-threaded modes of operation.
AddressFilterMode	This is used by the dispatcher to route incoming messages to the correct endpoint. It specifies the type of match semantics used by the dispatcher to route incoming messages to the correct endpoint.
backhaulPingTimeout	
workerPingTimeout	This is an integer specifying milliseconds. This controls locked worker detection. The value specifies how long to wait for a response from the SYSPRO runtime. If a ping response exceeds this time, the worker is considered locked and marked for termination.
workerPingInterval	<ul> <li>This is an integer that lets the supervisor test the worker every x calls and determine if the worker is healthy on every pool re-balance.</li> <li>Zero value = detection only on pool re-balance.</li> <li>Greater than Zero value = detection on every x calls.</li> <li>Lower values -&gt; Greater reliability. Higher values -&gt; Higher performance.</li> </ul>
minWorkers	This is an integer that specifies the minimum number of worker processes. Zero workers will cause all calls to execute internally, with no redundancy.
schedulerInterval	This is an integer specifying seconds that specifies how often the scheduler checks the recycling thresholds. Recycling is a cooperative process, and workers will only be recycled when they fault or have no jobs in progress.           Image: Note: Setting this too low will reduce performance.
schedulingAlgorithm	This determines how the scheduler chooses a worker.
	RoundRobin - a worker is chosen in round-robin fashion.
	This is better for high workloads with mostly short-lived transactions.
	• <b>BalancedWorkload</b> - a worker is chosen according to the jobs in progress, where the worker with the fewest jobs is considered most favorable.
	This is better for low workloads with mostly long-lived transactions.
recyclingTimes	This is a comma separated list (hh:mm) and defines fixed times at which workers are recycled.
recyclingInterval	This is a single value (hh:mm) and defines a fixed interval at which workers are recycled.
recyclingRequests	This is an integer that recycles a worker after it has served a certain number of requests.
recyclingPagedMemory, recyclingVirtualMemory, recyclingWorkingSet	This recycles a worker if the memory usage goes over this threshold (n{B KB MB GB}) Although all these settings are available, only the working set value is close to what Windows exposes in the Task Manager. The other values may be useful in certain cases, but are harder to monitor.
recyclingWatchFolders	This is a pipe-delimited list of folders that recycles workers when a folder us modified.

## **Point of Sale Services**

This service lets you synchronize master data, copy transactional data from offline branches to the main server and post transactional data that was copied from offline branches.

It comprises the following services:

• SYSPRO 8 Point of Sale Synchronize Service (mandatory)

This is installed in both Online and Offline environments and is used to synchronize master data (i.e. it self-heals POS Web Site components).

• SYSPRO 8 Point of Sale Copy Service (optional)

This copies transactional data from Offline branches to the Main Server.

• SYSPRO 8 Point of Sale Posting Service (optional)

This posts the transactional data that was copied from Offline branches.

This service is used by SYSPRO Point of Sale.

## **Installation Considerations**

You install the Point of Sale services using the SYSPRO 8 Point of Sale autorun.

During the installation you will be required to configure settings for the service.

## **Debugging and Diagnostics**

#### Service Config.exe.file

You can debug this service by editing the associated config file in elevated mode (i.e. with administrator privileges).

The files are located in the folder to which you installed the service.

#### **Windows Event Viewer function**

You can view monitoring and troubleshooting messages about this service using the Event Viewer function in Windows:

(Control Panel > System and Security Administrative Tools > Event Viewer > Applications and Service Logs)

#### Windows Services function

You can start, stop, restart and configure this service using the Services function in Windows:

(Control Panel > System and Security Administrative Tools > Services).

## Referencing

#### **Configuration file**

C

**Note:** You should only edit this file for debugging purposes. Don't use this as a method to update values for the service. This is because a wizard installation updates the system registry, which is what is read when using the service. A fresh installation overwrites these values, which may cause problems when you next run the service.

#### SYSPROServerSyncService.exe.config

Application settings	Description
UpdateTime	21:00

Application settings	Description
UpdateInterval	86400000
EnableDebuggingToLog	True/False
DebugLog	C:\Program Files (x86)\SYSPRO\SYSPRO 8 Point of Sale Services\DebugLog.txt
InstanceId	This indicates the default instance of SYSPRO with which the service will communicate. SYSPRO instances are reflected in your Windows Registry to identify the \Base folder of your SYSPRO install where the necessary .dll and .exe files are located.
BaseLoadBalancerAddress	This is the TCP-based network protocol (net.tcp://) that points to your SYSPRO 8 e.net Communications Load Balancer installation.
CompanyCode	This is the SYSPRO Company Directory
InstallDir	The is the directory that you installed the software.
IsOnline	True/False.
PosUrl	/SYSPRO8POS_/

## SysproPosCopyService.exe.config

Application settings	Description
BaseLoadBalancerAddress	This is the TCP-based network protocol (net.tcp://) that points to your SYSPRO 8 e.net Communications Load Balancer installation.
InstanceId	This indicates the default instance of SYSPRO with which the service will communicate. SYSPRO instances are reflected in your Windows Registry to identify the \Base folder of your SYSPRO install where the necessary .dll and .exe files are located.

## SYSPROPosPostService.exe.config

Field	Description
LogTracingDetailToApplication Log	True/False.
LogTracingDetailToTextFile	True/False. C:\Program Files(x86)\SYSPRO\SYSPRO 8 Point of Sale Services\TracingLog.txt
TransactionPostingInterval	10000
EndOfDayPostingInterval	600000
InvoiceAndPaymentBatchPostingInterval	120000
BaseLoadBalancerAddress	This is the TCP-based network protocol (net.tcp://) that points to your SYSPRO 8 e.net Communications Load Balancer installation.
InstanceId	This indicates the default instance of SYSPRO with which the service will communicate. SYSPRO instances are reflected in your Windows Registry to identify the \Base folder of your SYSPRO install where the necessary .dll and .exe files are located.

# Replication

The replication setup is required to distribute the data down to all the Offline branches. Any changes happening at Head Office will be replicated down to the branches so that the branches are kept up to date with stock levels and customer balances etc.. The type of replication chosen is transactional replication so that the updates are replicated down to the branches as soon as they happen and this ensures that the branch data is as up-to-date as the internet connection allows for.

Only **setup data** is replicated which means that you will centrally administer all your setup including Branch and User setup and this information will be replicated to all branches so that consistent setup is maintained across all branches.

There are 3 parts to replication:

#### 1. Distributor and distribution

The first part of the replication setup is the distribution.

This is where you configure the distributor and distribution database and the accounts involved. This defines which server acts as the distributor and which database will be utilized as the distribution database.

## 2. Publisher and publication

The second part of replication setup is to define the publisher and which distributor it needs to use. The publisher is the server that will publish a database and/or other Microsoft SQL Server items known as articles. During publisher and publication setup you specify which articles you want published. You will also specify which distributor will be used by the publisher to send it's publications.

#### 3. Subscriber

The third part of the setup is the subscriber. This is where you specify the server that will receive the publications from the distributor and how this subscription will be handled by these two servers.

# **Hardware and Software Prerequisites**

## **Hardware Requirements**

## Hardware requirements:

- Intel Xeon E3 3.2GHz / Core i5 3.2 GHz or higher processor (Server standard processor and ram according to SYSPRO requirements.)
- 16 GB of RAM

## **Client Machine (Recommended)**

## Windows

- Windows 7
- An installation of Microsoft Silverlight (version 4.1.10329.0 or later) only works with Internet Explorer
- Avanti works with Chrome.
- Screen Resolution: minimum of 1024 x 768
- Internet Explorer 9 (Browsers must be in 32-bit mode)
- 1.6 GHz or higher processor
- RAM according to SYSPRO's minimum specifications

## Macintosh OS 10.4/10.5 Intel (Intel-based)

- Intel Core Duo 1.83 GHz or higher processor
- 512MB of RAM

#### Compatible operating systems and browsers

Operating System	IE9	IE8	IE7	IE6	Firefox 3.6+	Safari 4+	Chrome 12+
Windows Vista	Yes	Yes	Yes	No	Yes	No	Yes
Windows 7	Yes	Yes	No	No	Yes	No	Yes
Windows Server 2008	Yes	Yes	Yes	No	Yes	No	Yes
Windows Server 2008 R2	Yes	Yes	No	No	No	No	Yes
Windows Server 2003, Windows XP SP2, SP3	No	Yes	Yes	Yes	Yes	No	Yes
Macintosh OS 10.5.7+ (Intel-based)	No	No	No	No	Yes	Yes	No

**Note:** The **SYSPRO Point of Sale** application does **not** support **Windows Terminal** client machines and a minimum resolution of 1024 x 768 is recommended.

## **System Requirements**

There are three platforms required in order to run SYSPRO Point of Sale:

- 1. Main Server -> running Windows Server and SQL Server
- 2. Branch Server -> running Windows Server and SQL Server Edition
- 3. Client Machine -> running Windows 7 or Macintosh OS

Other important system restrictions and recommendations to consider:

- 1. SYSPRO Point of Sale will not run over Terminal Server
- 2. Laser Printers should be used for printing till slips
- 3. SYSPRO Point of Sale does not work with older versions of Internet Explorer

## Minimum requirements for touch screen tills

Screen resolution = 1024 x 768

Operating system = Windows 7 with Internet Explorer 9 (IE9)

Below are the minimum requirements that are provided as a guideline.

Please note the servers will not only be running the SYSPRO Point of Sale, but also Windows, Internet Browser, IIS and multiple other applications. Therefore, this will affect performance.

Ensure that each of the following is installed and adhered to on each of the respective servers, prior to the SYSPRO Point of Sale implementation.

#### **System Requirements**

Prerequisites	Installation Notes & Considerations	
	Windows Server 2012 creates user profiles for each IIS application pool (e.g. when you change the decimal separator to a "." for en-ZA, the change is only applied to the profile into which you are logged).	
	You can resolve this by changing it against the user profile that was created for the application pool.	
Windows Server 2008 R2		
Microsoft SQL Server 2008 R2 Enterprise or Standard version	<ul> <li>Ensure that Replication and Agent are installed.</li> <li>The SYSPRO Point of Sale database must use the same Microsoft SQL collation as the SYSPRO database.</li> <li>When installing the Express version for the branches, the AUTOCLOSE option for the databases must be false, otherwise it will close if it is not active and the application will crash.</li> <li>Enable SQL network communications (typically on port 1433). This involves changing the firewall settings against online and offline branches.</li> <li>Ensure that the relevant client protocols are enabled against your SQL Server's configuration (i.e. TCP/IP or Named Pipes).</li> <li>Set Max Text Replication Size to 2147483647 (SQL Server Properties &gt; Advanced)</li> </ul>	
Microsoft .NET Framework 4.5	If you are running Windows 8 and above and/or Windows Server 2012 and above, you will need to enable HTTP Activation for WCF services. From the Control Panel > Programs > Programs and Features > Turr Windows features on or off > Microsoft .NET Framework 4.5, enable the following options: • .NET Framework 4.5 Advanced Services • WCF Services • HTTP Activation If you are not running on one of these versions, you only need to instal .NET Framework 4.5.	
11S7	From the (Control Panel > Programs > Programs and Features > Turn Windows features on or off > Internet Information Services) enable the following options: • Web Management Tools	

Prerequisites	Installation Notes & Considerations		
Prerequisites	Installation Notes & Considerations  IIS 6 Management Compatibility IIS 6 WMI Compatibility IIS Metabase and IIS 6 configuration compatibility IIS Management Console  World Wide Web Services Application Development Features INET Extensibility ASP.NET ISAPI Extensions ISAPI Filters Common HTTP Features		
	Common HTTP Features     Default Document     Directory Browsing     HTTP Errors     Static Content      Health and Diagnostics		
	<ul> <li>HTTP Logging</li> <li>Request Monitor</li> <li>Performance Features <ul> <li>Static Content Compression</li> </ul> </li> </ul>		
	<ul> <li>Security</li> <li>Request Filtering</li> </ul>		
Microsoft Silverlight (version 4.1.10329.0 or later)	If you are running Windows 8 and above and/or Windows Server 2012 and above, you will need to enable HTTP Activation for WCF services		
Adobe Acrobat Reader			

## **Internet Requirements**

## **Online configuration**

For a purely online configuration, where the main server is hosted off-site, a fast, low latency and consistent Internet connection is require between the client and the server.

**Note:** There will be a lower transfer of data since only the required data will be retrieved and communicated to the main server. However speed, latency and consistency will have a considerable impact on the user experience

## **Offline-Online configuration**

For an offline - online configuration, the main server will periodically communicate with the offline server and requires a fast internet connection between the servers. This is to facilitate the main server updating the offline server through data replication (which could be substantial), and for the offline server to copy transactions to the main server.

The connection between the servers does not need to be consistent, but would be determined by how up-to-date the data needs to be.

**Note:** There will be more bulk transfer between th servers, but would allow the users to void connecting to the main server for the majority of the functionality by using the intermediary offline server.

## **SYSPRO Setup Requirements**

## **Required Connection Details**

The following connection details need to be readily available prior and during the online and offline installations.

Remote connection details such as:

- 1. SYSPRO login details
- 2. Server username & password (for SQL and SYSPRO application server)
- 3. Team Viewer details for both
- 4. Microsoft SQL login details
- 5. Administrative access.

#### **Prerequisites for Installation**

- Set your SYSPRO authentication to Microsoft SQL Server Authentication this applies to your SQL company, your SYSPRO operators.
- Add the POS license to your company registration this should be the same license used to install the branch/offline server. Ensure that the \_\_\_POS operator has been created. This should be done automatically when you import the POS license.
- Ensure that the Reserving stock required option is disabled in SYSPRO. The option is located on the Details tab of the Sales Order Setup program.
- Configure Credit note tax to avoid VAT duplication. Set the Default sales tax code for credit notes option to none ().
- Select the Use tax code from stock item or service charge for credit notes option ()
- 1. Set authentication to use Microsoft SQL Server

This applies to your SQL company, your SYSPRO operators and your ODBC data source.

2. Disable stock reservations

The Reserving stock required option is located on the Details tab of the Sales Order Setup program.

#### 3. Add the PoS license to your company registration

This should be the same license used to install the branch/offline server.

Ensure that the \_\_POS operator has been created - this should be done automatically when you import the PoS license.

#### 4. Configure Credit note tax to avoid VAT duplication:

- Set the Default sales tax code for Credit notes option to none.
  - This option is located in the Setup Options program, under Tax > Company Tax Options.
- Select the Use tax code from stock item or service charge for credit notes option.

This option is located in the Setup Options program, under Tax > Sales Orders options

## Integration with SYSPRO ERP

SYSPRO Point of Sale integrates with SYSPRO ERP modules, please take note of the following:

## Mandatory SYSPRO ERP modules

## Accounts Receivable

Customer information is used in Point of Sale sales orders.

• Sales Orders

Sales are recorded in sales orders.

• Inventory

Provides stock code information, availability and price.

Cash Book

Handles the transactional bank to which end of day processing amounts will be posted.

General Ledger

Defines the ledger codes to which end of day processing amounts will be posted.

## **Recommended SYSPRO ERP modules**

Lot Traceability

Lot traceable stock items can be entered in counter sales.

Trade Promotions

Promotions are currently available and Pricing will follow.

## Licensing

## **Software licence**

The software that runs at a branch is referred to as the **SYSPRO Offline Foundation**; this is a 'lite' version of core SYSPRO.

## **Microsoft SQL Server licensing**

You need to license the full **Microsoft SQL Server** product for the main head office server, as this is the product that provides the functionality to replicate data to branches.

In order to keep the branch costs down, the free **Microsoft SQL Server Express** product should be installed at branches.

#### **User licenses**

Licensing users for **SYSPRO Point of Sale** is different to core SYSPRO as **SYSPRO Point of Sale** licensing allows for concurrent users per Point of Sale branch.

#### For example:

Point of Sale user licenses = 10

Branches = 3

Licenses must be allocated to each branch first, say Branch 10 = 3 licences, Branch20 = 5 licenses, and Branch 30 = 2 licenses.

Concurrency is then controlled by branch according to what has been allocated.

In this example no more then 3 users will be able to log into branch 10.

You can change this allocation at any stage providing that the total number of Point of Sale users licensed in SYSPRO is not exceeded.

As Point of Sale users are separate entities from SYSPRO Users, you can, for example, have 10 SYSPRO user and 500 SYSPRO Point of Sale users. However, you can link a Point of Sale user to an existing

SYSPRO user, for example, when the Point of Sale operator has functions that are also performed in SYSPRO.

When creating a Point of Sale user, the system automatically generates a SYSPRO user for auditing purposes, which are flagged as Point of Sale only (i.e. the SYSPRO operator that is generated cannot be used to login to SYSPRO).

C

**Note:** When Point of Sale generates an operator in SYSPRO, it copies the \_POS operator. Therefore it is recommended that you ensure the correct access, Microsoft SQL passwords etc, is configured for this user.

## **Stand-alone option**

SYSPRO Point of Sale is developed specifically to run off SYSPRO ERP, therefore a stand-alone option is NOT available.

However, you can buy a single SYSPRO ERP User license (with the modules required for Point o Sale) and as many Point of Sale user licenses as required. SYSPRO would then be in place in order to power the application.

## SYSPRO e.net Solutions licensing with SYSPRO Point of Sale

Neither the e.net system manager nor any e.net business objects need to be purchased for SYSPRO Point of Sale - all the required e.net functionality is bundled into the module. Therefore you do not have to license SYSPRO e.net Solutions in order to use SYSPRO Point of Sale.

However, if any third party application needs to interface with SYSPRO, a SYSPRO e.net Solutions license will be required.

Although Point of Sale does not need to be licensed for e.net Solutions in any way, there is still access against an operator group that can cause permission issues if the operator does not have access to the business object being used in Point of Sale.

Therefore it is recommend that you create an operator group **POS** and then assign the **\_POS** operator (as well as all existing POS operators) to this group. In addition to this, please ensure that against this operator group you provide access to all the e.net Solutions business object. This will avoid potential access problems when new features (which use new business objects) are added to Point of Sale.

# **Components installed**

The following components are included:

# **Installation Online**

## How to Download the SYSPRO Point of Sale Autorun

The following steps describe how to download the SYSPRO Point of Sale installation autorun.

 Run the SYSPRO Installer exe from the SYSPRO Deployment folder. The SYSPRO Installer Login window is displayed.

2. Once a connection is made to the SYSPRO Deployment Service, you need to login using your InfoZone credentials. A valid InfoZone account is required to continue.

Enable the **Save Customer Details** checkbox option if you want the app to save your **Customer Code** and **Customer PIN** when logging in.

If you are not listed as a customer on the InfoZone (i.e. you are a Partner or Super-user) an additional screen is displayed for you to enter the relevant customer code for the customer you want to install.

The SYSPRO Installer Sign in window is displayed.

SYSPRO INSTALLER	③ i ぞ - ×
	SYSPRO Simplifying your Success
	Sign in
	Hi Helen Hollick
	You are listed on the InfoZone as a SYSPRO Corporate User. Please provide the Customer ID and Customer PIN for the Customer you are currently installing for.
	Customer ID
	Customer PIN
	Save Customer Details
Lag Harter Control Con	CANCEL
Version 1.0.0.39 [SUPPORT]	

The **Customer ID** defaults to the customer code defined within your InfoZone profile, and must match the SYSPRO account you are installing.

The **Customer PIN** is the 6-digit code included in the email you received that contained your SYSPRO 8 license.

You can verify your Customer ID and PIN against the **CustomerId** and **CustomerPin** elements of the license XML file.

3. Select **CONTINUE**.

The installation files are stored on the **Deployment Share** in the syspro-additional-software folder.

6. Select the **Download** button from the applicable version that you want to install.

The application then downloads the **Autorun ISO** to your local **Deployment Share** folder under the release subfolder.

- 7. Once the download has completed, a message is displayed confirming the folder location.
- 8. Select OK.

## **Installing SYSPRO Point of Sale**

The following steps describe how to install SYSPRO Point of Sale at the main site, online.

You need to have installed:

- Microsoft .NET Framework 4.5
- SYSPRO 8 e.net Communications Load Balancer
- SYSPRO 8 2019 R2 or higher
- SYSPRO Avanti Initialization Service
- 1. Run the SYSPRO Point of Sale autorun.exe program.

The Welcome, Select an installation type window is displayed.

2. Select **Online Installation**.

The SYSPRO 8 Point of Sale Online window is displayed.

If not performed earlier, you are now ready to install the **SYSPRO Point of Sale Services**. Follow the task **Installing the SYSPRO Point of Sale Services**.

### Installing SYSPRO Point of Sale Services

The following steps describe how to install Services for Point of Sale.

You need to have installed:

- Microsoft .NET Framework 4.5
- SYSPRO Avanti Initialization Services
- SYSPRO 8 e.net Communications Load Balancer
- SYSPRO 8
- SYSPRO 8 Point of Sale Online
- 1. Run the SYSPRO Point of Sale autorun.exe program.

The Welcome, Select an installation type window is displayed.

2. Select Online Installation.

The SYSPRO 8 Point of Sale Online window is displayed.

3. Select SYSPRO 8 Point of Sale Services and then Install.

If the SYSPRO Point of Sales Services have not previously been installed and you are running the SYSPRO 8 Point of Sale Online install, the following window will automatically be displayed after the Online install is complete. Refer to the Installing SYSPRO Point of Sale Online task

The Welcome to the installation Wizard for SYSPRO 8 Point of Sale Services window is displayed.

4. Select **Next >** to continue.

The License Agreement window is displayed.

Feature Description The synchronization service is required for ALL SYSPRO 8 Point of Sale sites. It synchronizes files when new port updates are installed. This feature requires 1861KB on your hard drive. It has 0 of 2 subfeatures selected. The subfeatures require 0KB on your hard drive.
Install to: C:\Program Files (x86)\SYSPRO\SYSPRO 8 Point of Sale Service InstallShield	change
Help Space < Back	Next > Cancel

6. Select where you want to install the **Point of Sale Sync Services**. There are three services, the **Point of Sale Copy and Posting Service** and the **Point of Sale Print Service**.

The Point of Sale Copy and Posting service is actually two different services i.e. Point of Sale Copy Service and Point of Sale Posting service.

 a) Point of Sale Copy and Posting Service, select whether you want these features to be installed on the local hard drive or these features and all sub-features will be installed on local hard drive. These services are only required at he MAIN online SYSPRO 8 Point of Sale site. They will copy data from OFFLINE branches and post it to SYSPRO.

For our purposes select the option **The feature and all subfolders will be installed on the local hard drive**.

The *Custom Setup* window is displayed.

🛃 SYSPRO	8 Point of S	ale Services - Ins	stallation Wizard		×

14. Exit from the install program.

### Launching SYSPRO Point of Sale Online for the First Time

The following steps describe how to launch SYSPRO Point of Sale, and then log into Point of Sale using the newly created branch and user.

Once you have installed SYSPRO Point of Sale, launch the program in your browser (Internet Explorer).

The initial loading of the site will take longer due to the SYSPRO Point of Sale database being added to **SQL Server**. Once the database is created Point of Sale will detect that there are no branches or users setup and prompt you to enter the basic information required for this.

You can then use the newly set up **Point of Sale User** to log in to the **SYSPRO Point of Sale** application.

1. Open the **SYSPRO Point of Sale** Silverlight application by entering the URL *http://{your server name}/SYSPRO8AvantiPOS\_{yourcompanyID}/* in your browser's **Address** bar.

Currently you need to use Internet Explorer to load the Silverlight version of Point of Sale.

Enter http://localhost/SYSPRO8AvantiPOS\_EDU1/ in your browser's Address bar.

The SYSPRO Point of Sale application is opened, with the following error message.

#### 2. Select Ok.

The Add New Branch And User window is displayed, showing the Branch Detail tab.

Branch Detail       User Detail         Branch Code:	Add New Bra	onch And User			×
Branch Code: Description: SYSPRO Branch:	Branch Detail	User Detail			
Description: SYSPRO Branch:	Branch Code:				
SYSPRO Branch:	Description:				
	SYSPRO Branch:				•
OK Carl				Ok	Cancel

3. Add a new branch and user.

The bear minimum information is entered here. You will need to return to the **Branch and User** program to complete the balance of the required information later.

- 4. Create a branch.
  - a) Enter a branch code in the Branch Code field.

Enter 10 - North in the Branch Code field.

The branch code has a limitation of 10 characters.

b) Enter a branch description in the **Description** field.

Enter Receivables - North (Online) in the **Description** field.

c) Select a SYSPRO branch from the SYSPRO Branch list.

Select 10 - Receivables - North from the SYSPRO Branch dropdown list.

5. Create a user.

a) Select the User Detail tab.

The User Detail tab is displayed in the Add New Branch And User window.

Add New Branch And Use	r		×
Branch Detail User Detail

	PAT		
Change Password On Next Login			
		Ok	Cancel

b) Enter the user login name in the User Name field.

Enter Pat in the User Name field.

c) Enter an email address in the Email field.

Enter patw@OUTDOORS.com in the Email field.

d) Enter a password in the Password field.

Enter *p*@ssw0rd in the **Password** field.

e) Enter the user's first name in the First Name field.

Enter Pat in the First Name field.

f) Enter the user's last name in the Last Name field.

Enter Webb in the Last Name field.

g) Select **Existing** to link the user to an existing SYSPRO operator, or select **New** to create a new SYSPRO operator for Point of Sale only.

**Note:** If linking to an existing SYSPRO operator, ensure that the SYSPRO operator is set to use **Microsoft SQL Server authentication.** 

Also ensure that the username and password used for Microsoft SQL Server authentication are the same as the details provided in the SYSPRO Point of Sale Online and Offline installation wizards.

Select Existing.

Enter or Browse for *PAT* in the **SYSPRO Operator** field.

h) Select Change Password On Next Login if you want the operator to create their own password on next login.

For training purposes you do not have to select this option.

i) Select Ok.

**Note:** An **Admin** user with full permissions is created. It is recommended to change the admin password on first login.

#### Select Ok. 6.
