Archiving Migration

Exploring

Where does it fit in?

When running the **Data Conversion** program, you are given the option to defer the conversion/migration of your archived data.

The **Archiving Migration** program lets you complete the migration of that data from SYSPRO 7 format to SQL in SYSPRO 8.

The archive data that can be converted from this program includes:

- ECC BOM archive (XML)
- WIP archive (XML)
- Sales order archive (XML)
- Lot archive (ISAM)

Navigation

- This program (`IMPPAM`) must be run using the **Run SYSPRO Program** (`CTRL+R`) function.

Starting

Prerequisites

The relevant archive files must be available on the server:

- ECC BOM archive (XML)
- WIP archive (XML)
- Sales order archive (XML)
- Lot archive (ISAM)

Restrictions and Limits

- Archived data will not be available in *SYSPRO 8* until it has been converted using this program.

Using

Hints and Tips

- Because the conversion of archive information to SQL can take long if there's a large amount of archived data, we recommend running this program once for each archive type.
