Archiving Migration

Exploring

Where it fits in?

This program lets you complete the migration of data from *SYSPRO 7 Update 1 SYSPRO 8*, if you elected to defer the conversion/migration of your archived data when running the **Data Conversion** program.

The archive data that can be converted from this program includes:

- ECC BOM archive (XML)
- WIP archive (XML)
- Sales order archive (XML)
- Lot archive (ISAM)

Navigation

- The **Archiving Migration** program (`IMPPAM`) must be run using the **Run SYSPRO Program** (`CTRL+R`) function .

Starting

Prerequisites

The relevant archive files must be available on the server:

- ECC BOM archive (XML)
- WIP archive (XML)
- Sales order archive (XML)
- Lot archive (ISAM)

Restrictions and Limits

- Archived data will not be available in *SYSPRO 8* until it has been converted using this program.

Using

Hints and Tips

- Because the conversion of archive information to SQL can take long if there's a large amount of archived data, we recommend running this program once for each archive type.
