# AR Withholding Tax At Point of Capture

## Exploring

### Where it fits in?

Managing withholding tax obligations can be complex, particularly when regulations require precise timing in tax recording. SYSPRO simplifies this process by automating the calculation and recording of withholding tax at the point of sales invoice creation.

This capability ensures accurate tax compliance, eliminates manual intervention, and enhances efficiency in tax reporting.

By seamlessly integrating this functionality into sales processes, SYSPRO supports businesses in meeting regulatory requirements with confidence and precision.

### Benefits

- **Effortless Compliance:**  
Automatically record withholding tax at the time of invoice creation, meeting new regulatory requirements in the Philippines.
- **Improved Efficiency:**  
Reduce manual effort with automated tax calculation at the sales order line level.
- **Enhanced Accuracy:**  
Minimize errors in tax reporting through integrated and automated processes.

## Terminology

### Customer

A customer provides the mechanism for you to raise sales orders within SYSPRO.

The static information captured against a customer is used when processing sales transactions and determines, for example, the tax and discounts applicable.

Documents generated from these transactions (e.g. invoices, credit notes, debit notes) are also stored against the customer.

The customer code can be used as a filtering tool when generating reports.

Customers are maintained using the **Customers** program (*Program List > Accounts Receivable > Setup*).

## Sales order

Sales orders are used to record the sale or transfer of goods and services to both internal and external customers.

It forms a temporary legal contract between your company and the customer, as well as providing an audit trail of goods sold or transferred.

## Stock code

A stock code is a number that uniquely identifies an inventory item that is bought or manufactured and which is typically stored in one or more warehouses.

All activity relating to the forecasting, purchasing, manufacturing, stocking and selling of a stocked item is tracked by means of the stock code.

A stock code can be linked to one or more lot numbers if the item is defined as lot traceable. If there is a warranty, the stock code can be defined as serialized and linked to one or more serial numbers.

If the **Bill of Materials** module is installed, stocked items may be linked in a parent/component relationship for use in Work In Progress and Sales Orders (Kit sales).

You can use the stock code as a selection criterion when generating reports.

You maintain stock codes using the **Stock Code Maintenance** program.

## Withholding Tax

Withholding tax is an advance payment of company tax that is collected by the customer when paying a supplier. It is typically used in countries such as the Philippines, Thailand and Singapore.

### FOR EXAMPLE:

Company A sells a computer to Company B for \$1000.00.

When Company B pays for the computer they deduct withholding tax from the payment and send it to the tax office.

The full \$1000 is credited against the account, but the payment is split into one portion that is paid to the tax office and the remaining portion that is paid to the supplier.

# Starting

## Prerequisites

- To use this feature, the following setup option(s) must be enabled:
  - Withholding tax required (*Setup Options > Tax > Company Tax Options*)
- To enable this capability in **SYSPRO 8 2023** or **SYSPRO 8 2024**, you must install the appropriate hotfix for your version:
  - SYSPRO 8 2023:  
**SYSPRO.8.2023.KB8101029**
  - SYSPRO 8 2024:  
**SYSPRO.8.2024.KB8110364**
- Ensure that the operator printing the invoice has a default bank code defined in the **Operator Maintenance** program (under the **Defaults** tab).

This is required for withholding tax values to post correctly to AR when the invoice is created.

## Deploying

This process is only applicable to **SYSPRO 8 2023** and **SYSPRO 8 2024**.

### AR WITHHOLDING TAX

CONFIGURATION PROCESS  
SYSPRO 8 2023 & SYSPRO 8 2024

CONFIGURE  
SETUP  
OPTIONS

CREATE  
CUSTOM  
FORM  
FIELDS

ASSIGN  
FIELDS TO  
PROGRAMS

To enable the **AR Withholding Tax At Point of Capture** functionality in **SYSPRO 8 2023** and **SYSPRO 8 2024**, specific configuration steps are required.

As database modifications cannot be applied to these versions, the implementation relies on creating custom form fields. These fields must be added to designated tables and displayed in specified window panes.

It is crucial to follow the outlined steps precisely to ensure the functionality operates as intended.

The following process provides detailed instructions for setting up the necessary custom fields and integrating them into your system, ensuring compliance with regulatory requirements and seamless operation:

## Configure Setup Options

1. Open the **Setup Options** program and navigate to the **Company Tax Options** (*Setup Options > Tax > Company Tax Options*).
  - a. Within the **ACCOUNTS RECEIVABLE WITHHOLDING** section, define the **ACCOUNTING BASIS** option as **Point of capture**.

## Create Custom Form Fields

1. Open the **Custom Form Design** program (*SYSPRO Ribbon bar > Administration*).

Add the following required custom form fields to the specified tables, ensuring each field is configured exactly as outlined in the instructions:

- a. **Apply Withholding tax (WHT001)**
  - i. Required tables:
    - **ArCustomer+** (i.e. Customer)
    - **CusSorMaster+** (i.e. Sales Order)
    - **CusMdnMaster+** (i.e. Dispatch Note)
  - ii. Field Definition:

Field	Description
Caption	Apply AR withholding tax
Field name	WHT001
Column name	ApplyArWithholding
Field type	Alpha
Field length	3
Decimals	0

Field	Description
Default	{Spaces}
Validation	List
Configure	Configure the following list entries: <ul style="list-style-type: none"> <li>▪ Value 1 = Yes</li> <li>▪ Value 2 = No</li> </ul>

#### b. AR Withholding tax code (WHT002)

##### i. Required tables:

- [InvMaster+](#) (i.e. Stock Code)
- [CusSorDetailMerch+](#) (i.e. Sales Order Line - Merchandised)
- [CusSorDetailNMerch+](#) (i.e. Sales Order Line - Non-merchandised)
- [CusMdnDetail+](#) (i.e. Dispatch Note Line)
- [SorServiceCharge+](#) (i.e. Sales Service Charge)
- [ArTrnDetail+](#) (i.e. AR Trn Detail)

##### ii. Field Definition:

Field	Description
Caption	AR Withholding tax code
Field name	WHT002
Column name	ArWithTaxCode
Field type	Alpha
Field length	5
Decimals	0
Default	{Spaces}
Validation	None

#### c. AR Withholding tax value (WHT003)

##### i. Required tables:

- [ArTrnDetail+](#) (i.e. AR Trn Detail)

##### ii. Field Definition:

Field	Description
Caption	AR Withholding tax value
Field name	WHT003
Column name	ArWithTaxValue
Field type	Numeric
Field length	12
Decimals	6
Default	{Zeros}
Validation	None

## Assign Custom Form Fields to Programs

After configuring the required custom form fields, the next step is to assign these fields to the specified panes within the relevant programs.

## Mandatory

It is essential to place each of the following fields in the correct panes as outlined, although their exact positioning within the pane is flexible.

Proper placement ensures the functionality operates as intended.

1. **Customers** (ARSPCS):
  - a. Required Pane = **General Details**
    - i. Custom form field to assign = **WHT001**
2. **Stock Code Maintenance** (INVPST):
  - a. Required Pane = **Sales Details**
    - i. Custom form field to assign = **WHT002**
3. **Sales Order Entry** (IMP040):
  - a. Required Pane = **Order Header**
    - i. Custom form field to assign = **WHT001**
  - b. Required Pane = **Stocked Line**
    - i. Custom form field to assign = **WHT002**
  - c. Required Pane = **Non-stocked Line**

- i. Custom form field to assign = **WHT002**
- d. Required Pane = **Freight Line**
  - i. Custom form field to assign = **WHT002**
- e. Required Pane = **Miscellaneous Charge Line**
  - i. Custom form field to assign = **WHT002**
- 4. **SO Service Charges from Order Entry** (IMP04C):
  - a. Required Pane = **Service Charge Line**
    - i. Custom form field to assign = **WHT002**
- 5. **Service Charges** (SORPM2):
  - a. Required Pane = **Service Charge Line**
    - i. Custom form field to assign = **WHT002**

## Optional

The following optional custom form field applications are only required if you want to view the withholding tax requirement within the relevant program:

- 1. **Customer Query** (ARSPEN):
  - a. Custom form field to assign = **WHT001**  
*Suggested Pane = Customer Information*

## Restrictions and Limits

- The **Sales Order Entry Express** program does not support **AR Withholding Tax At Point of Capture** in **SYSPRO 8 2023** and **SYSPRO 8 2024**.
- The Consolidated Dispatches functionality is not supported within the **SYSPRO 8 2023** and **SYSPRO 8 2024** releases.

## Security

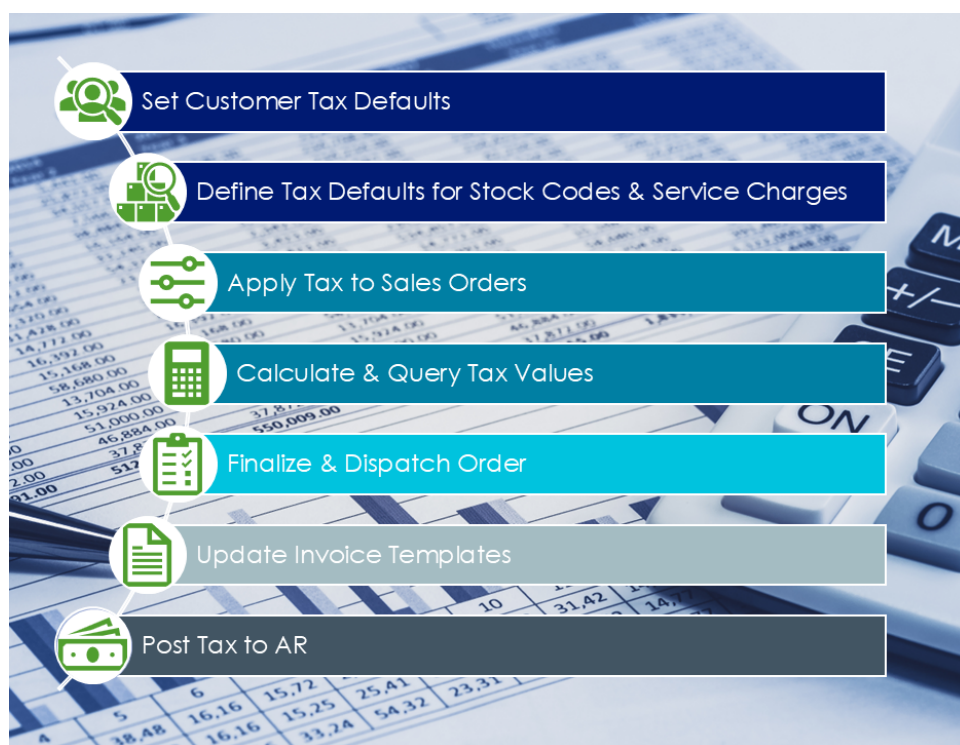

You can secure this feature by implementing a range of controls against the affected programs. Although not all these controls are applicable to each feature, they include the following:

- You restrict operator access to *activities* within a program using the **Operator Maintenance** program.
- You can restrict operator access to the *fields* within a program (configured using the **Operator Maintenance** program).
- You can restrict operator access to *functions* within a program using passwords (configured using the **Password Definition** program). When defined, the password must be entered before you can access the function.
- You can restrict access to the eSignature *transactions* within a program at operator, group, role or company level (configured using the **Electronic Signature Configuration Setup** program). Electronic Signatures provide security access, transaction logging and event triggering that gives you greater control over your system changes.
- You can restrict operator access to *programs* by assigning them to groups and applying access control against the group (configured using the **Operator Groups** program).
- You can restrict operator access to *programs* by assigning them to roles and applying access control against the role (configured using the **Role Management** program).

# Using

## Process

### Understanding the AR Withholding Tax Process

With the **AR Withholding Tax At Point of Capture** functionality configured, you can now integrate it into your business operations.

The following provides a high-level overview of the standard business process for using this capability:

1. Set default customer preferences:
  - Optionally, configure default settings for a customer to apply withholding tax.
  - If this is not set, the company's default tax option will be applied.
2. Define default tax codes for stock items:
  - Optionally, assign a default withholding tax code to specific stock codes for automated application.
3. Define default tax codes for service charges:
  - Optionally, assign a default withholding tax code to service charges.
  - A default withholding tax code is mandatory for service charges attached to a stock code.

- For service charges added directly to the sales order, the operator can specify the withholding tax code when saving the line.
4. Configure withholding tax at sales order creation:
    - During sales order creation, you can choose whether to apply withholding tax.
    - If applying, ensure that each sales order line includes a valid withholding tax code (use the browse function to select an existing tax code).
  5. Calculate and query withholding tax values:
    - The withholding tax value is automatically calculated.
    - View order and invoice values using the **Query** toolbar function of the **Sales Order Entry** program.
  6. Complete the sales order process:
    - Once the order is finalized (i.e. End Order), proceed with dispatching or follow the normal sales order work flow.
  7. Withholding tax during dispatch:
    - During dispatch, the withholding tax code for each sales order line is carried over to the dispatched lines.
-  New non-merchandise lines cannot be added in the **Dispatch Note Maintenance** program. Additional lines must first be added in **Sales Order Entry**.
8. Update invoice print templates:
    - To display the total withholding tax value on printed invoices, ensure the corresponding print format/template is updated.
  9. Post withholding tax to Accounts Receivable (AR):
    - As invoices are created, the withholding tax value for each line is automatically posted to AR.

## Affected programs

The following indicates areas in the product that may be affected by implementing this feature:

### Setup programs

Setup Options

*SYSPRO Ribbon bar > Setup*

The **Company Tax Options** form includes a **ACCOUNTS RECEIVABLE WITHHOLDING** section that lets you configure the following setup options:

- **Accounting basis**

This can be defined as one of the following:

- Point of payment
- Point of capture

This field only becomes available once the **WITHHOLDING TAX REQUIRED** setup option is enabled.

Customers

*Program List > Contact Management > Setup*

The following only applies once the relevant setup options are defined, and the required custom form fields are configured and added to the program.

The **General Details** pane contains the following field for defining the withholding tax requirement per customer:

- **Apply AR withholding tax**

This can be defined as one of the following:

- **Y** = Withholding tax will be applied
- **N** = Withholding tax will not be applied
- **Blank** = The default Company tax option will be used for the customer.

## Stock Code Maintenance

*Program List > Inventory > Setup*

The following only applies once the relevant setup options are defined, and the required custom form fields are configured and added to the program.

The **Sales Details** pane contains the following field for viewing the withholding tax requirement defined against the stock code:

- **AR Withholding tax code**

## SO Document Formats

*Program List > Sales Orders > Setup*

This program enables you to add the following field to the totals section of any SO invoice format:

- **Total withholding tax** (i.e. `SORFMT05.MAM`)

## Batch programs

### Service Charges

*Program List > Sales Orders > Sales Order Processing*

The following only applies once the relevant setup options are defined, and the required custom form fields are configured and added to the program.

The **Service Charge Line** pane contains the **AR Withholding tax code** field for viewing the withholding tax requirement defined.

## Transaction Processing programs

### Sales Order Entry

*Program List > Sales Orders > Sales Order Processing*

The following only applies once the relevant setup options are defined, and the required custom form fields are configured and added to the program.

- Within the **Order Header**, the following field lets you define the sales order's withholding tax requirement:

#### Apply AR withholding tax

This can be defined as one of the following:

- **Y** = Withholding tax will be applied
  - **N** = Withholding tax will not be applied
  - **Blank** = The default Company tax option will be used for the customer.
- You can view the **AR withholding tax code** defined against each line type within the following panes:
  - Stocked line
  - Non-stocked line
  - Freight line
  - Miscellaneous Charge line
- The corresponding withholding tax values are displayed within the **Order Value** and **Invoice Recap** (accessible from the **Query** menu).
  - The **Invoice Recap** displays the WHT value based on the shipped quantity.
  - The **Order Value** displays the WHT value based on the order quantity (Original values), outstanding order quantity (Outstanding values) and ship quantity (To invoice values).

### SO Single Level BOM

*Accessible from the Sales Order Entry program*

The **AR Withholding Tax At Point of Capture** functionality extends to managing sales orders involving kit-type items (i.e. 'K' or 'S') and finished goods (i.e. 'F').

- When adding a sales order line for a kit-type item:
 

The WHT code for each component is assigned and saved at the component level. In these cases, the parent item does not require a WHT code, as the total value is calculated from its components.

- Conversely, for finished goods:

The WHT code is mandatory at the parent level, and no WHT codes are required for the associated components.

This ensures proper tax application and compliance based on the type of item processed within the sales order.

## SO Service Charges from Order Entry

*Accessible from the Sales Order Entry program*

The following only applies once the relevant setup options are defined, and the required custom form fields are configured and added to the program.

The **Service Charge Line** pane contains the **AR Withholding tax code** field for viewing the withholding tax requirement defined.

## Query programs

### Sales Order Query

*Program List > Sales Orders*

The withholding tax recorded against a sales order is displayed within the **Order Values** pane.

### Sales Invoice Query

*Program List > Sales Orders*

The withholding tax recorded against a sales order is displayed within the following panes:

- Invoice Header
- Dispatch Invoice Header
- Consolidated Invoice Header

## Affected business objects

The following indicates the business objects that are affected by this feature:

### Setup objects

#### AR Customer Maintenance

The XML element, `<ApplyWithholdingTax>`, provides flexibility in specifying whether withholding tax should be applied to a customer.

While this element is optional, when included, it accepts the following values:

- **Y** = Withholding tax will be applied
- **N** = Withholding tax will not be applied
- **Blank** = The default Company tax option will be used for the customer.

#### Inventory Stock Code Maintenance

The XML element, `<WithholdingTaxCode>`, facilitates the setup of a default withholding tax code against stock items.

This element accepts either a valid withholding tax code or a blank value:

- **Valid withholding tax Code:**  
Assigns the specified withholding tax code as the default for the stock code.
- **Blank Value:**  
Clears any existing default withholding tax code for the stock code.

### Transaction objects

#### Post Admin Tax Options

The **Accounting basis** tax setup option controls when the AR Withholding Tax functionality is applied, provided the **WITHHOLDING TAX REQUIRED** setup option is enabled.

This can be defined as one of the following:

- **P – Point of Payment** (default):  
Withholding tax is applied when payment is made, ensuring that no existing customers are impacted by this change.
- **C – Point of Capture:**  
Withholding tax is applied at the time of sales order capture and invoicing, enabling early recognition of withholding tax obligations.

## Dispatch note creation from Sales Order

When creating a dispatch note for a sales order, the `<CopyCustomForm>` parameter must be set to 'Y' to ensure that the associated withholding tax custom form fields are carried over from the sales order.

Additionally, for non-merchandise lines added directly to the dispatch note (not originating from the sales order), a valid WHT code must be provided in the corresponding `<...WHTCode>` element if the sales order is configured to apply WHT functionality.

## Dispatch Note Add Lines from Sales Order

When adding a dispatch note line to an existing dispatch, the corresponding WHT custom form fields must be copied from the custom forms of the related sales order line.

It is important to note that lines with a withholding tax code cannot be added directly in the dispatch note program. To include such lines, they must first be added to the originating sales order and then incorporated into the dispatch from there.

This ensures proper handling of withholding tax and maintains data consistency across the sales order and dispatch processes.

## SO Sales Order Import

Elements related to **AR Withholding Tax At Point of Capture**:

- The `<ApplyWithholdingTax>` element within the **Order Header** indicates whether withholding tax is applied to the customer in the sales order being captured.
- The `<StockWhtCode>`, `<MiscWhtCode>` and `<FreightWhtCode>` elements specify the withholding tax codes for each line type in the order details.

Additional validation rules ensure accurate application:

- For Kit ('K') items:  
Each component must have a default WHT code applied before the kit item is processed.
- For stocked lines with attached service charges:  
Each service charge must also have a default WHT code. If any service charge is missing a WHT code, an error will occur, and the line will not be added.

## Query objects

### Customer Query

The customer's withholding tax (WHT) option is included in the XML output when the `<IncludeCustomForms>` parameter is set to 'Y'. This ensures that withholding tax-related settings are accurately returned and available for integration or reporting purposes.
