# SYSPRO Rules Engine

## Exploring

### Where it fits in?

The **SYSPRO Rules Engine** helps you streamline your business processes by acting as a sophisticated *if/then* statement interpreter (i.e. rule translator).

A set of services monitor your SYSPRO transactions in real time and (once a specific set of rules is defined) they analyze and determine when something you're interested in happens. Your configured actions required by each rule are then processed accordingly.

Rules are applicable to all SYSPRO transactions, regardless of where they originate (e.g. **SYSPRO Desktop**, **SYSPRO Web UI (Avanti)**, **SYSPRO Espresso**, etc.).

The SYSPRO Rules Engine comprises the following components:

- SYSPRO 8 Rules Data Service
- SYSPRO 8 Rules Engine Service
- Rules Administrator

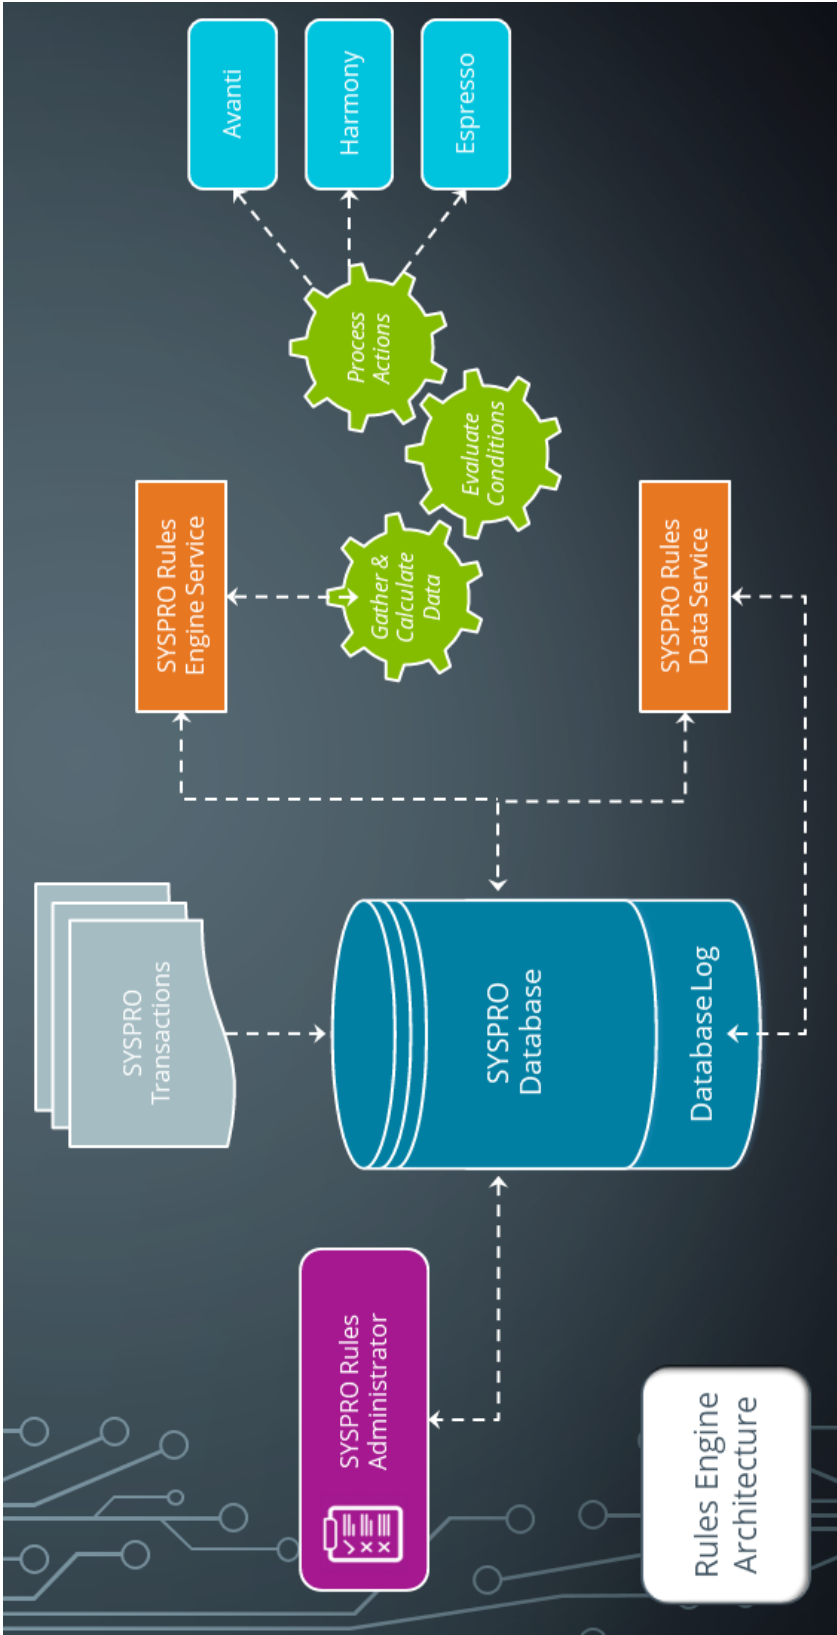

Once you start using the **SYSPRO Rules Engine** and have configured your required rules, your SYSPRO transactions continue as usual and post to the SYSPRO database.

The **SYSPRO Rules Engine** has access to a set of business objects. This means you can create dynamic rules.

# Architecture

## SYSPRO 8 Rules Data Service

This service monitors your SYSPRO transaction log in real time (e.g. inserts, updates or deletes) and extracts specific information required for current and active rules.

The data extracted is then persisted in the SYSPRO database, which enables the **SYSPRO 8 Rules Engine Service** to process the data without intervention so that it can execute the actions required by each configured rule.

The information extracted includes before and after values (e.g. if a stock code's description is changed from 'Bike' to 'Mountain Bike', both values are stored).

This is useful with regard to *delete-type* transactions as you have access to the whole record deleted, not just the key.

## SYSPRO 8 Rules Engine Service

This service processes the data extracted by the **SYSPRO 8 Rules Data Service** after monitoring the SYSPRO transaction log.

The service is responsible for:

- Processing each log entry relayed by the **SYSPRO 8 Rules Data Service** service.
- Gathering the required data and calculating the additional values required.
- Evaluating sets of conditional statements.
- Executing all actions required per rule.

## Rules Administrator

The **Rules Administrator** is a **SYSPRO Web UI (Avanti)** program responsible for configuring rules (by company or system-wide) that are stored in the SYSPRO database.

# Terminology

## Rule

Rules consist of conditions and actions.

A condition is evaluated and (if true) the **SYSPRO Rules Engine** initiates the defined actions.

## Rule action

Actions are executed when the conditions of a rule are met.

### FOR EXAMPLE:

These actions range from displaying a Harmony message, to creating a log file in a specific location, or tracking the history of a specific database column.

## Rule condition

Conditions act as triggers that initiate a specific action according to how they have been configured. They let you fine-tune a rule with the records to be excluded and when certain actions must be performed (i.e. they act as a set of conditional expressions that must be met before any rule actions are performed).

## Rule target

A rule target indicates the database table to which a rule applies, as well as the operation on that table (e.g. All, Insert, Update or Delete).

Targets can be set as company-specific or system-wide.

## Rule variable

Variables are used to define or manipulate any values required in the conditions or actions of a rule. The different property packets of a variable include the following:

Variable	Description
New	Variables that begin with this property packet contain the new values of a record <i>after</i> an insert or update occurs. They are only available for <b>Insert</b> or <b>Update</b> type operations.
Old	Variables that begin with this property packet contain the previous value of a record <i>before</i> an update or delete occurs. They are only available for <b>Update</b> or <b>Delete</b> type operations.

Variable	Description
Current	<p>Variables that begin with this property packet contain the current value of a record.</p> <div>  <p>This is useful if the record has changed since the <b>SYSPRO 8 Rules Data Service</b> flagged the transaction. Most of the time these values are the same as the <i>New</i> variables.</p> </div> <p>We recommend using the <i>New</i> property packet, as <i>Current</i> variables have a slight overhead.</p>
Global	<p>Variables that begin with this property packet are values related to the transaction, such as:</p> <ul style="list-style-type: none"> <li>■ SchemaName</li> <li>■ TableName</li> <li>■ Operation</li> <li>■ ChangedFields</li> <li>■ TransactionDate</li> <li>■ RuleId</li> <li>■ LevelId</li> <li>■ LevelValue</li> <li>■ MessageId</li> <li>■ BatchIndex</li> <li>■ SystemWideDb</li> </ul>
Var	<p>Variables that begin with this property packet are custom variables that have been defined in the <b>Variables</b> pane of the <b>Rules Administrator</b> program.</p>

# Starting

## Prerequisites Technology

The following technology prerequisites are applicable to using this feature:

- SYSPRO 8 Rules Engine Service
- SYSPRO 8 Rules Data Service
- SYSPRO Avanti Web Service
- SYSPRO 8 Avanti Initialization Service

## Configuring

The following options must be configured within the **Setup Options** program (*SYSPRO Ribbon bar > Setup > Setup Options > System Setup*) to use this feature:

Form name	Relevant options
Rules Engine/Harmony System Setup	<p>This defines the companies you want the <b>SYSPRO 8 Rules Engine Service</b> to monitor.</p> <ul style="list-style-type: none"><li>■ Rules engine options<ul style="list-style-type: none"><li>▫ Rules Engine active company list</li></ul></li></ul>
	<p>This defines the options that will let you access the relevant <b>SYSPRO Harmony</b> actions in the <b>Rules Administrator</b> program.</p> <ul style="list-style-type: none"><li>■ Harmony options<ul style="list-style-type: none"><li>▫ Rules Engine active company list</li><li>▫ Harmony API service address</li><li>▫ Harmony service address</li></ul></li></ul>
SQL System Setup	<p>This defines your SQL credentials which the service uses for its database connections.</p> <ul style="list-style-type: none"><li>■ Harmony database connection<ul style="list-style-type: none"><li>▫ Harmony authentication</li><li>▫ SQL Server name</li><li>▫ Harmony login</li><li>▫ Harmony login password</li></ul></li></ul>

Form name	Relevant options
Connectivity System Setup	<p>This defines the options that will let you access the relevant <b>SYSPRO Web UI (Avanti)</b> and <b>SYSPRO Espresso</b> actions in the <b>Rules Administrator</b> program.</p> <ul style="list-style-type: none"><li>■ Avanti settings<ul style="list-style-type: none"><li>▫ Avanti website address</li></ul></li><li>■ Espresso settings<ul style="list-style-type: none"><li>▫ Notification address</li></ul></li></ul>

## Restrictions and Limits

- The **Rules Administrator** program is currently only accessible from within **SYSPRO Web UI (Avanti)**.

# Solving

## Error messages

### Rules Engine is not enabled in SYSPRO

#### Cause

This message is displayed when loading the **Rules Administrator** program in **SYSPRO Web UI (Avanti)** because of a missing configuration in the SYSPRO core product.

#### Solution

You need to specify a list of companies that the **SYSPRO 8 Rules Engine Service** must monitor. Configure the following options against the **Rules Engine/Harmony** form of the **Setup Options** program:

- Rules Engine options
  - Active company list

## FAQs

### How do I define a new rule?

1. Open the **Rules Administrator** program in *SYSPRO Web UI (Avanti)*.
2. Select the **Add New Rule** icon (.
3. From the **New Rule** window, enter the following mandatory information:
  - a. The **Name** of the new rule.
  - b. A **Description** for the rule.
  - c. The **Table** in the database to which the rule applies.
  - d. Whether the rule applies at company level or system-wide in the **Category** field.  
If at **Company** level, ensure that you enter the relevant company ID at the **Company** field.
  - e. Whether the rule should result from an **Insert** (new record), **Update** (changed record) or **Delete** (removed record) in the database.

Alternatively, you can select **All** to cover all of these transactions.

Tick the **Enable** checkbox to enable the rule immediately, or save the rule and enable it at a later stage.

Select the **Add Rule** icon (.

4. From the **Rule Information** pane, expand the **Variables** section to apply any additional fields or calculations.
  - a. Select the **Add new variable** icon (.
  - b. Indicate the **Name** of the variable so that it becomes usable later in your rule (e.g. `ContactName`).

The **Name** can contain letters, digits, and the underscore character (\_) but it can't contain any spaces.

The first character of the **Name** must be a letter.

- c. Indicate the **Type** and **Value** of the variable.
  - d. Repeat for all variables that you want to apply to the rule.
  - e. Select the **Save Rule** icon (.
5. From the **Rule Information** pane, expand the **Conditions** section to filter out your transactions.

- a. Select the **Add new condition** icon ()
  - b. Indicate the details of the required condition.
  - c. Repeat for all conditions that you want to apply to the rule.
  - d. Select the **Save Rule** icon ()
6. From the **Rule Information** pane, expand the **Actions** section to assign the action the rule should perform.
- a. From the **Actions** toolbar, select the required action.
    -  Add Avanti Notification
    -  Add Delete Rule
    -  Add Disable Rule
    -  Add Emailing Action
    -  Add Espresso Notification
    -  Add File Log
    -  Add Harmony Message
    -  Add Track History
    -  Add Workflow Action
  - b. Repeat for all actions that you want to apply to the rule.
7. Select the **Save Rule** icon ()

## What variable types are available when defining custom variables?

Depending on your requirements, you can select to use any of the following variables when defining a custom variable in the **Variables** pane of the **Rules Administrator** program:

### String

A String variable holds zero or more characters (e.g. letters, numbers, spaces, comma, etc.).

#### FOR EXAMPLE:

email@company.com

### Int32

An Int32 variable is a value type that represents signed integers, with values that range from negative 2,147,483,648 to positive 2,147,483,647.

#### FOR EXAMPLE:

5000

### Double

A Double value type represents fractional or whole values and can contain up to 15 digits in total (including those before and after the decimal point).

#### FOR EXAMPLE:

35,25

When selecting this variable type, ensure that it matches the **Regional Format** of the machine on which the **SYSPRO 8 Rules Engine Service** is installed.

### Boolean

A Boolean variable represents either a true or false value.

### Date/Time

The DateTime value type represents dates and times, with values ranging from 12:00:00 midnight, January 1, 0001 A.D. (Anno Domini) through to 11:59:59 P.M., December 31, 9999 A.D.

When selecting this variable type, ensure that it matches the **Regional Format** of the machine on which the **SYSPRO 8 Rules Engine Service** is installed.

#### FOR EXAMPLE:

1991/03/08 02:35:00 or 1991/03/08

## SQL

A SQL type variable lets you:

- select values directly from your SQL tables.
- join a foreign table.
- retrieve aggregate values.

You can use table variables and variables defined before this variable in the SQL statement.

The format to use is {New.xxx}, {Old.xxx}, {Current.xxx}, {Var.xxx} and {Global.xxx}.

For system-wide database joins, ensure that you use the {Global.SystemWideDb} variable (e.g. [{Global.SystemWideDb}].[dbo].[AdmOperator]).

### EXAMPLES:

```
select MAX(Description) as StockCodeDescription from InvMaster where StockCode = 'A100'
```

```
select MAX(SellingPrice) as SellingPrice from InvPrice where StockCode = '{New.StockCode}' and  
PriceCode = '{New.ListPriceCode}'
```

```
select Sum((MOrderQty * MPrice) + (NMscChargeValue)) as OrderValue FROM [SorDetail] where  
SalesOrder = '{New.SalesOrder}'
```

```
select MAX(CreditLimit) as CreditLimit, MAX(OutstOrdVal) as OutOrderVal from ArCustomer where  
Customer = '{New.Customer}'
```

In your statement, you can only return a single row, and the return column's alias (e.g. `MAX(Description) as StockCodeDescription`) is used as the variable name. We recommend that the alias name is the same as the variable name.

## CSharp

CSharp variables must return a value. The return type can be any type and remain that type for the remainder of the rule.

If a Double type value is returned, it is treated as a double in the **Conditions** and **Actions** sections of the rule.

CSharp variables are very effective for performing various things, including the following:

- Calculations

### FOR EXAMPLE:

```
return (New["PromotionValue"] / New["PromotionLimit"]) * 100;
```

- Rounding

- **FOR EXAMPLE:**

```
return int.Parse( Math.Round( (ML["PODaysLate"]), 0).ToString());
```

or

```
return Double.Parse( Math.Round( (ML["ChanceOrderWillBeLate"]),
4).ToString()) * 100;
```

- Assigning descriptions to flags

- **FOR EXAMPLE:**

```
switch((string)New["TrnType"])
{
    case "R":
        return "Receipt";
    case "I":
        return "Issue";
    case "P":
        return "Physical";
    case "T":
        return "Transfer";
    case "A":
        return "Adjustment";
    case "C":
        return "CostChange";
    case "M":
        return "CostModification";
    case "B":
        return "BinTransfer";
    case "S":
        return "Sale";
    default:
        return "Other";
}
```

- Date calculations

- **FOR EXAMPLE:**

```
return (New["DateReceived"] - New["LineDueDate"]).TotalDays;
```

- Misc

- **FOR EXAMPLE:**

```
if (Var["DaysLate"]="1")
    return "day";
else
    return "days";
```

or

```
return DateTime.Parse(New["EstArrivalDate"].ToString()).ToShortDateString
();
```

You can use table variables and variables defined before this variable in the SQL statement.

The format to use is `New["xxx"]`, `Old["xxx"]`, `Current["xxx"]`, `Var["xxx"]` and `Global["xxx"]`.

## Why should I use conditions when defining a rule?

Conditions are a set of statements that a rule needs to pass before actions can be performed.

Values of the same type can be compared to evaluate to a true or false outcome.

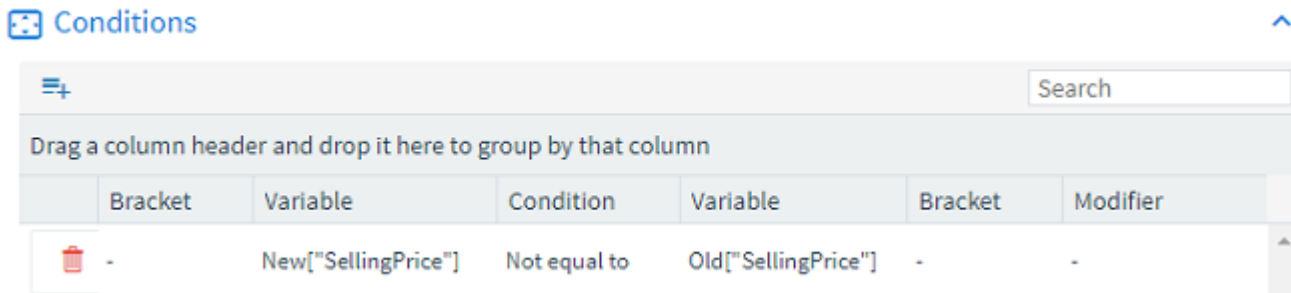

The combination of these statements using the **AND** or **OR** modifiers evaluates to a single true or false outcome.

If this final outcome is true, then the rule moves to processing each action.

The following scenarios demonstrate some of the different types of conditions you can apply:

- *Scenario: You want to check whether a specific value has changed for an update rule.*

**FOR EXAMPLE:**

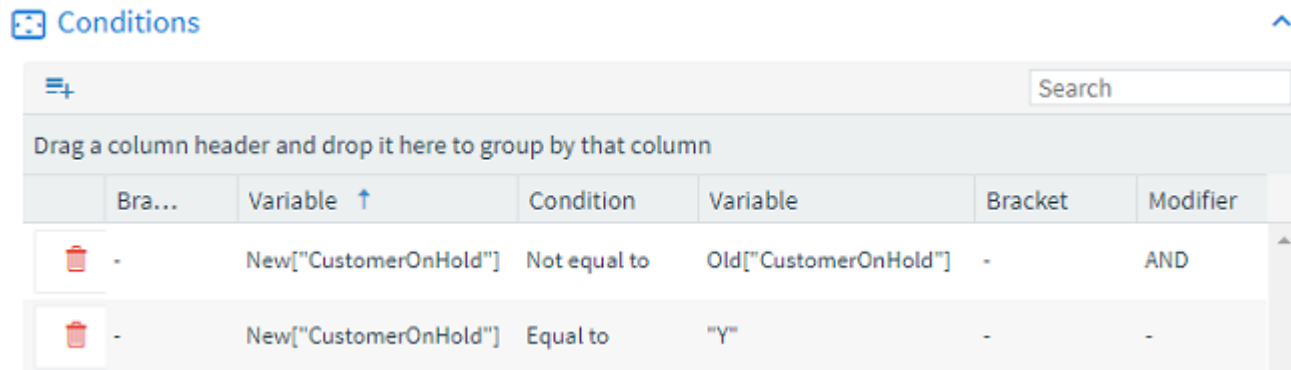

The screenshot shows the 'Conditions' panel with a search bar and a table. The table has columns: Bracket, Variable, Condition, Variable, Bracket, and Modifier. A single condition is listed: New['SellingPrice'] Not equal to Old['SellingPrice'].

Bracket	Variable	Condition	Variable	Bracket	Modifier
-	New['SellingPrice']	Not equal to	Old['SellingPrice']	-	-

- *Scenario: You want to check a specific flag on the record (e.g. if the `OnHold` flag has changed and equals `Y`).*

**FOR EXAMPLE:**

The screenshot shows the 'Conditions' panel with a search bar and a table. The table has columns: Bra..., Variable, Condition, Variable, Bracket, and Modifier. Two conditions are listed: New['CustomerOnHold'] Not equal to Old['CustomerOnHold'] AND New['CustomerOnHold'] Equal to 'Y'.

Bra...	Variable	Condition	Variable	Bracket	Modifier
-	New['CustomerOnHold']	Not equal to	Old['CustomerOnHold']	-	AND
-	New['CustomerOnHold']	Equal to	'Y'	-	-

- *Scenario: You want to know when a value has increased.*

**FOR EXAMPLE:**

## Conditions

Drag a column header and drop it here to group by that column

	Bracket	Variable ↑	Condition	Variable	Bracket	Modifier
	-	New["QtyScrapped"]	Greater than	Old["QtyScrapped"]	-	-

Using a numeric table variable (e.g. `New["SellingPrice"]`) and a fixed numeric value (e.g. `10`) in the same condition will fail.

Ensure that you first convert the fixed value to a `SqlDecimal`.

## How do I query a hashtag table for History Tracking rules?

You can use the `COMQRL` business object to query the hashtag table if you have configured a Track History rule.

### FOR EXAMPLE:

```
<Query>
  <Key>
    <Function>QH</Function>
    <HistoryTableName>InvPrice</HistoryTableName>
    <HistoryColumnName>SellingPrice</HistoryColumnName>
    <HistoryColumnDataType>N</HistoryColumnDataType>
    <HistoryColumnKey1>B100</HistoryColumnKey1>
    <HistoryColumnKey2>A</HistoryColumnKey2>
    <HistoryColumnKey3 />
    <HistoryColumnKey4 />
    <HistoryColumnKey5 />
    <HistoryColumnKey6 />
    <HistoryColumnKey7 />
    <HistoryColumnKey8 />
    <HistoryColumnKey9 />
    <HistoryColumnKey10 />
    <HistoryColumnKey11 />
    <HistoryColumnKey12 />
    <HistoryColumnKey13 />
    <HistoryColumnKey14 />
    <HistoryColumnKey15 />
  </Key>
  <Options>

  <IncludeAdditionalHistoryColumn1>InvMaster.Description</IncludeAdditionalHistoryColumn1>
  <IncludeAdditionalHistoryColumn2 />
  <IncludeAdditionalHistoryColumn3 />
  <IncludeAdditionalHistoryColumn4 />
  <IncludeAdditionalHistoryColumn5 />
  <IncludeAdditionalHistoryColumn6 />
  <IncludeAdditionalHistoryColumn7 />
  <IncludeAdditionalHistoryColumn8 />
  <IncludeAdditionalHistoryColumn9 />
  </Options>
</Query>
```

## What are service operators and what are they used for?

Service operators are created by SYSPRO and are used by [SYSPRO services](#) to obtain information about SYSPRO.

The service operator code starts with a double underscore to differentiate them from other operators. A default company code must be assigned to each service operator within the **Operator Maintenance** program, as we use the company code to log in the service operator via e.net .

The following is a list of service operators and their function within SYSPRO:

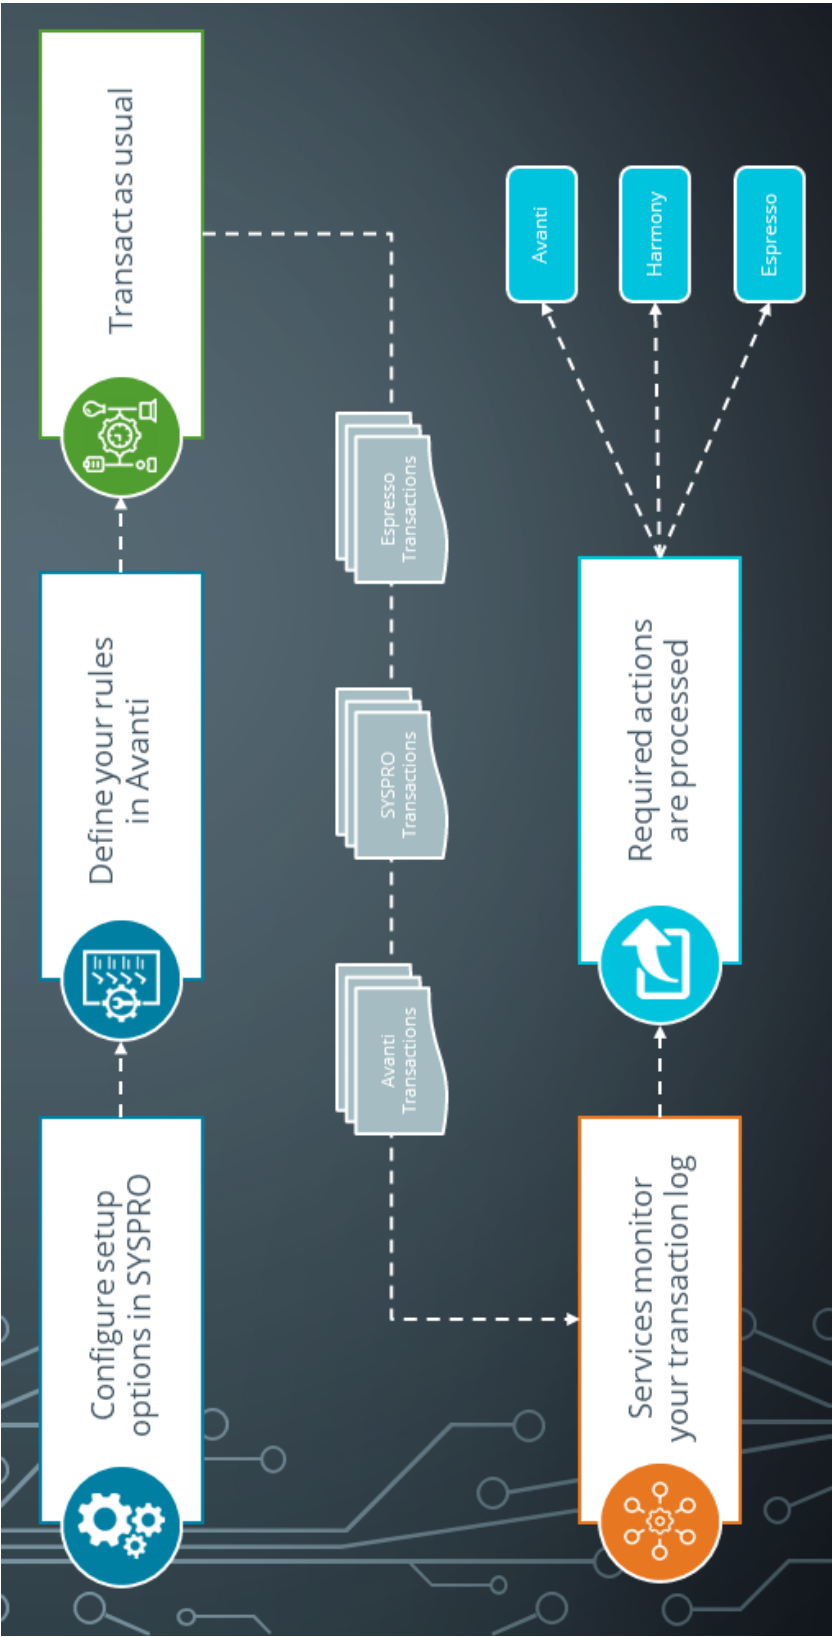

- The `__ADSYNC` service operator is used by the **SYSPRO 8 Active Directory Sync Service** to push **Microsoft Active Directory (AD)** information into SYSPRO for Active Directory managed operators.
- The `__DFM` service operator is used by the **SYSPRO 8 Document Flow Manager Folder Poller** and **SYSPRO 8 Document Flow Manager Queue Poller** to monitor folders, send files to the queue and process files.
- The `__ESP` service operator is used by the following services:
  - **SYSPRO 8 Espresso Service**,
  - **SYSPRO 8 Espresso Notification Service**,
  - **SYSPRO Espresso Development Plugin** and the
  - **SYSPRO Avanti Web Service** to obtain information for the password reset and forgot password functionality.
- The `__POS` service operator is used by the **SYSPRO 8 Point of Sale Services** to determine and validate the setup options and required credentials at start up, update the required databases and post to SYSPRO (if the Point of Sale operator doesn't have access to SYSPRO).
- The `__RUL` service operator is used by the **SYSPRO 8 Rules Engine Service** and the **SYSPRO 8 Rules Data Service**.
- The `__SA` service operator is used by the **SYSPRO 8 Analytics** service to make business object calls.
- The `__SAI` service operator is used by the **SYSPRO 8 Machine Learning** service.
- The `__SRS` service operator is used by the **SYSPRO 8 Reporting Host Service** and the **SYSPRO 8 Cognitive Service** to manage client-side report printing.

- Only specific services use service operators to log in via e.net.
- SYSPRO creates service operators by copying the `ADMIN` operator. If the `ADMIN` operator record doesn't exist (i.e. it may have been deleted), then the current operator is used when saving system details from the **Setup Options** program.

# Using

## Process

The following process depicts how to configure and access the **SYSPRO Rules Engine**:

1. Configure the required options against the following forms of the **Setup Options** program:
  - SQL System Setup
  - Connectivity System Setup
  - Rules Engine/Harmony System Setup
  - Artificial Intelligence System Setup
2. Define your required rules using the **Rules Administrator** program in **SYSPRO Web UI (Avanti)**.
3. Transact as usual using any of the SYSPRO sources.
4. The **SYSPRO 8 Rules Engine Service** and **SYSPRO 8 Rules Data Service** then monitor your transaction log and launch the defined rules where applicable.
5. The configured actions are then processed to the defined platforms.

## Rule actions

There are a number of actions that you can apply to rules. These will be expanded with future SYSPRO releases.

### SYSPRO Web UI (Avanti) Notification

Messages sent to an operator in **SYSPRO Web UI (Avanti)** will also appear in the operator's **To Do List**.

Available parameters:

- Title
- Subtitle
- Operator
- Program to call (*Optional*)

This lets you indicate a SYSPRO program that should open automatically when the operator selects the notification.

- Program input key (*Optional*)

#### FOR EXAMPLE:

(Title) Stock below minimum quantity

(Subtitle) Stock on {New.StockCode} has fallen below the required minimum quantity on hand

(Operator) John Doe

(Program to call) INVPEN

(Input key) {New.StockCode}

Therefore, when John Doe selects this Avanti notification, the system automatically opens the **Inventory Query** program for stock code {New.StockCode}.

### SYSPRO Espresso Notification

Sending messages to an operator in **SYSPRO Espresso** is a great way to get hold of operators on the move.

Available parameters:

- Operator
- Message
- Application to call (*Optional*)

- This lets you indicate an Espresso application that should open automatically when the operator selects the notification.
- Application key/session variable (*Optional*)

Espresso users must be signed in to receive these notifications

## SYSPRO Harmony Beat

Beats posted to **SYSPRO Harmony** can include both a message (beat text) and sentiment. Hashtags can also be used in beat text and are included in Harmony follow feeds.

## Log File

This action creates a physical file that contains all the changes resulting from the SYSPRO transactions you defined to be logged.

File types available for selection:

- TXT
- CSV
- XML

You can also indicate how much detail must be logged by defining the **File Level**.

## Track History

This action lets you store every change to a column in the database, providing detailed history tracking.

It creates a Hashtag table (e.g. `InvPrice#`) with the same key, including a `PostDateTime` entry. If you enable the **Allow Duplicates** option, it records all entries, even if the value is the same as the previous entry in the Hashtag table.

### FOR EXAMPLE:

Track and store the selling price of your stock codes as they change.

Some prices might change daily, but the **SYSPRO Rules Engine** persists every single change.

## Delete Rule

This action deletes a rule after all its other actions have executed.

## Disable Rule

This action disables a rule after all its actions have executed (useful for once-off rules that should be disabled after a successful single execution).

## Email

This action lets you send an email.

## Workflow Action

This action lets you call into a **SYSPRO Workflow Services** operation.

## Sample Rules

The following Sample Rules are available from the **Rules Administrator** program in **SYSPRO Web UI (Avanti)** (located under **SYSPRO Templates**).

You can use these as is, or as templates to customize to your specific requirements.

### AP payment cycle (Harmony)

Description	Notify when a payment cycle is run.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

### AR Invoice Late Payment Predicted

Description	Notify when a late invoice payment is predicted for a customer.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> <li>■ Send Avanti Notification</li> </ul>
Sample AI Model	<code>CustomerInvoicePayDays</code>

### Asset added (Harmony)

Description	Notify when a new asset is added.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

### Asset changed (Harmony)

Description	Notify when an asset is changed.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

### Asset deleted (Harmony)

Description	Notify when an asset is deleted.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

### Cash Book deposit (Harmony)

Description	Notify when a deposit is made to cash book.
Actions	<ul style="list-style-type: none"> <li>Post Harmony Beat</li> </ul>
Sample AI Model	None

### Cash Book withdrawal (Harmony)

Description	Notify when a withdrawal is made from Cash Book.
Actions	<ul style="list-style-type: none"> <li>Post Harmony Beat</li> </ul>
Sample AI Model	None

### Credit limit (Harmony)

Description	Notify when a customer falls within 10% of their defined credit limit.
Actions	<ul style="list-style-type: none"> <li>Post Harmony Beat</li> </ul>
Sample AI Model	None

### Customer balance store

Description	Track the value of a defined customer's balance when changes occur.
Actions	<ul style="list-style-type: none"> <li>Track History</li> </ul>
Sample AI Model	None

### Customer on hold (Harmony)

Description	Notify when a customer is placed on hold.
Actions	<ul style="list-style-type: none"> <li>Post Harmony Beat</li> </ul>
Sample AI Model	None

### Customer order value change (Harmony)

Description	Notify when a defined customer's outstanding order value changes.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

### Customer value store

Description	Track the value of a defined customer's outstanding order value when changes occur.
Actions	<ul style="list-style-type: none"> <li>■ Track History</li> </ul>
Sample AI Model	None

### Delivery note printed (Harmony)

Description	Notify when a delivery note is printed.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

### Delivery received late (Harmony)

Description	Notify when a delivery is received late.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

### Detail line added to RMA (Harmony)

Description	Notify when a new detail line is added to an RMA.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Dispatch note released for invoicing (Harmony)**

Description	Notify when a dispatch note is released for invoicing.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**GL account added (Harmony)**

Description	Notify when a new general ledger account is added.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**GL Period Change (Harmony)**

Description	Notify when a change is made to the defined GL Period.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Harmony Beat for everything (Harmony)**

Description	Notify on every transaction that occurs.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Harmony for all changes to database (Harmony)**

Description	Notify on all changes made to the database.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Invoice 10% difference (Harmony)**

Description	Notify when there is more than a 10% difference on an invoice payment.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Job deleted for no customer (Harmony)**

Description	Notify when a job with no customer defined is deleted.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Job deleted (Harmony)**

Description	Notify when a job is deleted.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Job received late for no customer (Harmony)**

Description	Notify when a job with no customer defined is received late.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Job received late (Harmony)**

Description	Notify when a job is received late.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Job received short for no customer (Harmony)**

Description	Notify when a job with no customer defined is short-received.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

**Job received short (Harmony)**

Description	Notify when a job is short-received.
Actions	<ul style="list-style-type: none"> <li>■ Post Harmony Beat</li> </ul>
Sample AI Model	None

## Job status rule
